Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this product and related statistics or services should be directed to: Canadian Centre for Justice Statistics, Statistics Canada, Ottawa, Ontario, K1A 0T6 (Toll-free 1 800 387-2231) (telephone: (613) 951-9023) (Fax: (613) 951-6615) or to the Statistics Canada Regional Reference Centre in:

Halifax	(902) 426-5331	Regina	(306) 780-5405

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.

- nil or zero.
- amount too small to be expressed.

Preface

This study was requested by Saskatchewan Justice and undertaken as a cost recovery project by the Canadian Centre for Justice Statistics (CCJS). This report is based on two previous reports published by the CCJS: “Crime in Aboriginal Communities: Saskatchewan 1989” (Wolff, 1991) and “Police-Reported Aboriginal Crime in Calgary, Regina and Saskatoon” (Trevethan, 1993).

This report examines demographic and socio-economic characteristics of the Aboriginal and non-Aboriginal population in Saskatchewan, including on-reserve, urban and rural populations. Comparisons of crime data among reserve, urban and rural areas as well as comparisons between three urban centres (Prince Albert, Regina and Saskatoon) are made using different databases.

Acknowledgements

The crime data for this report were provided by the Prince Albert, Regina and Saskatoon Police Services as well as the Royal Canadian Mounted Police (RCMP). Their cooperation is greatly appreciated and without it, this study would not have been possible.

Other contributors are also acknowledged: David Gullickson (Saskatchewan Justice), Don Elliot and David McGillivray (Saskatoon Police Service), Sergeant Phil Campbell, Tony Allogia, Barbara Wilson and Leo Berndt (RCMP), and Betty Donovan and Lee Roulston (RCMP Saskatchewan).

The authors also wish to thank the following Statistics Canada personnel: Christine Wright, Stewart Hunter, Derek Janhevich, Barry MacKillop, Paul deSouza, Rebecca Kong (Canadian Centre for Justice Statistics), Sandra Gorman, Anne G. Lupien (Census Division), Patricia Cillis-Turner, Luc Therrien and Lisa Mussely (Geography Division), and Craig Shouldice (System Development Division).

Highlights

The data on Aboriginal status contained in this report are based on self-reported (Census) and/or observational (crime) data. They provide information on the nature and extent of Aboriginal involvement in urban, rural and reserve crime as well as the socio-demographic profile of the population of Saskatchewan.

- Based on the 1996 Census data, the Aboriginal population in Saskatchewan tend to be younger, have lower educational levels, higher unemployment rates, and substantially lower incomes than the non-Aboriginal population.
- Crime rates on reserves were two times higher than rates in rural or urban areas of the province. For violent offences, the rate was almost five times higher on-reserve than in urban or rural areas.
- In all three areas (reserves, urban and rural areas), a larger proportion of adults than youth were accused of a violent offence or an “*Other Criminal Code*” offence. In contrast, youth were more often accused of a property offence than any other offence type.
- In urban areas, there is an over-representation of Aboriginal persons involved in the criminal justice system. In 1997, more than one-half (52%) of those accused in Prince Albert, Regina and Saskatoon were Aboriginal compared to their 9% proportion in the population of these cities.
- A substantial difference in the male-female ratio of Aboriginal and non-Aboriginal accused was found. Although the majority of all those accused were male, there was a greater proportion of Aboriginal female than non-Aboriginal female accused.
- Aboriginal accused tended to be younger than non-Aboriginal accused. Almost one-third (31%) of Aboriginal accused were aged 12 to 17 years of age compared to 23% of non-Aboriginal accused.
- In the two cities where victim data were available (Regina and Prince Albert), there was a greater proportion of Aboriginal than non-Aboriginal victims of violent crime compared to their proportion in the overall population of these cities. In 1997, 42% of victims in Prince Albert and Regina were Aboriginal, compared to their 10% proportion in the population of these two cities.

1.0 Introduction

The disproportionate involvement of Aboriginal persons in the criminal justice system has been recognized for some time. Although Aboriginal people represent about 2% of Canada's adult population (1996 Census of the Population), they represent 18% of adults in provincial/territorial correctional facilities and 14% in federal penitentiaries (Robinson, D., Porporino, F.J., Millson, W.A., Trevethan, S., and MacKillop, B., 1998). This is especially evident in the Prairie Provinces and the Territories. In Saskatchewan, Aboriginal inmates represented 76% of inmates compared to 8% in the provincial adult population.

The purpose of this study is to examine the circumstances associated with police-reported Aboriginal crime in the province of Saskatchewan. Accused profiles were examined in order to determine whether differences existed between Aboriginal and non-Aboriginal accused. Profiles of victims of violent crime were examined to determine the nature and extent of victimization against Aboriginal people. Finally, offence characteristics were examined to determine the nature of incidents in which Aboriginal accused are involved.

Demographic and socio-economic conditions were also examined. Previous reports have established a link between criminality and variables such as unemployment, low income, and lower education (Indian and Northern Affairs Canada, 1990; Royal Commission on Aboriginal People, 1996; Saskatchewan Indian Justice Review Committee, 1992; Solicitor General of Canada, 1988; Task Force on the Criminal Justice System and its Impact on the Indian and Métis People of Alberta, 1991). These reports have also identified a larger proportion of Aboriginal than non-Aboriginal persons living under these conditions. It is important to identify the extent of Aboriginal involvement in the criminal justice system, particularly in urban areas where the problem may be most evident, while at the same time examining demographic and socio-economic variables which may contribute to criminality. In this way, appropriate programs and services may be developed for Aboriginal offenders and victims.

This report begins with a discussion of the methodology used in this project including a description of the databases utilized. It also discusses measurement issues and limitations of the study. Chapter 2 provides an overview of the population of Saskatchewan and describes various demographic and socio-economic indicators for Aboriginal and non-Aboriginal persons. The data for this chapter are based on the 1996 Census of the Population. Chapter 3 examines crime profiles for urban, rural and reserve areas, using the aggregate Uniform Crime Reporting (UCR) Survey. Chapter 4 examines crime in three urban centres (Prince Albert, Regina and Saskatoon) using the incident-based UCR Survey focusing on Aboriginal and non-Aboriginal accused and victim profiles. The crime data presented in this report are from the year 1997.

Appendix A contains tables from the 1996 Census of the Population. Crime data tables for 1997 are provided in Appendix B. Appendix C provides lists of reserves included in the analysis of Census and crime data. A glossary is included in Appendix D.

For the purposes of this study the term "Aboriginal person" refers to any individual of Aboriginal identity, including North American Indian, Métis, Inuit, and mixed Aboriginal identity (see Section 1.2.3 for an in-depth discussion of the definition of Aboriginal persons).

1.1 Methodology

This report examines the socio-economic, demographic and crime profiles of Aboriginal and non-Aboriginal peoples in Saskatchewan. Three main sources of data were used. Data from the 1996 Census of the Population were used to examine the socio-economic and demographic profiles of Aboriginal and non-Aboriginal persons in Saskatchewan. Additionally, 1997 data from the aggregate and incident-based UCR surveys were used to determine the nature and extent of Aboriginal and non-Aboriginal crime in Saskatchewan.

1.1.1 Population Data

Under the *Statistics Act*, the Census of Population is held every five years in order to collect information on Canada's population. The data obtained on May 14th, 1996 were used in this report in order to portray the socio-economic and demographic profile of Aboriginal and non-Aboriginal people living in Saskatchewan. Certain groupings of Census geographies were necessary due to rounding and suppression rules, as well as to respect certain regional and cultural specificities.

In the 1996 Census, 80% of Canadian households received a short questionnaire containing general questions regarding age, gender, language, marital status, etc. Twenty percent of all households received the long form. To obtain more detailed information on Aboriginal persons in Saskatchewan, the 20% sample data from the 1996 Census were used. This source does not include institutional residents. Since institutional residents account for approximately 1% of the total population, counts in this report will be about 1% lower than the total population counts.

Figure 1 shows that in Saskatchewan, there are 18 Census Divisions (CDs) which cover the entire province. CDs represent regional municipalities and other types of provincially-legislated areas. In order to analyze data more effectively, 11 different groupings were made: CDs 1-2-5-6 including Regina and Estevan (South East); CDs 3-4-7-8 including Moose Jaw and Swift Current (South West); CDs 9-11 including Yorkton and Saskatoon (Central East); CDs 12-13 (Central West); CDs 14-15 including Prince Albert (East); CD 16 including North Battleford (West 1); and CD 17 including Lloydminster (West 2); and CD 18 (North) was divided in four geographical boundaries (North East, North Central, North West and Athabasca corridor).

Within each CD, there are different types of Census Subdivisions (CSDs). In Census terminology, CSDs refer to cities, towns, rural municipalities, villages, Indian reserves, Indian settlements, resort villages, northern villages, northern towns, northern hamlets, and unorganized territories. For analysis purposes, three main groupings of CSDs were made: urban (which includes cities and towns with more than 10,000 population), reserves (including Indian reserves and Indian settlements¹) and rural (which includes the remainder of the CSDs above-mentioned). A comparison between socio-demographic characteristics was made between reserves, urban and rural areas within each census grouping.

¹ Refer to Appendix C for a complete list of reserves and Indian settlements identified in the 1996 Census of the Population for the province of Saskatchewan.

Figure 1
Map of Saskatchewan Showing Census Divisions and Groupings^a

^a The sub-divisions of Census Division 18 are an approximate geographical representation.

Source: Geography & Census Divisions, Statistics Canada.

Census data included eight major categories which were examined for Aboriginal and non-Aboriginal persons: gender, age, education, labour force activity, income, marital status, home language, and mobility. The Aboriginal identity question from the Census was used (see section 1.2.3 for definition). Census terminology is defined in the glossary (Appendix D).

1.1.2 Crime Data

Aggregate UCR Survey

Data from the aggregate UCR survey were used in order to compare urban, rural non-reserve and reserve crime for 1997. The aggregate UCR produces a historical record of crime and traffic statistics reported by every police agency in Canada since 1962. UCR data reflect reported crime that has been substantiated through police investigation. The survey includes information on the number of criminal incidents, the clearance status of those incidents and persons charged. The UCR survey is a summary or aggregate-type census, with data available for 100 separate criminal offences. Crime data provided by the aggregate UCR survey include the following information: accused (adult/youth), gender of accused and major offence category.

In addition to the UCR survey, aggregate data from the RCMP Operational Statistics Reporting (OSR) System were utilized to help distinguish between rural areas and reserves. Data were available by OSR zones (e.g., reserve, municipality, and town), which were provided by RCMP detachments in Saskatchewan. The data were grouped according to RCMP regional subdivision and analyzed by reserve, urban and rural areas within each subdivision. In 1997, there were seven RCMP subdivisions in Saskatchewan: North, including Prince Albert (Subdivision C); East, including Yorkton (Subdivision G); South East, including Regina, Moose Jaw and Estevan (Subdivisions D and A); South West, including Swift Current (Subdivision F); Central, including Saskatoon (Subdivision E); and North West, including North Battleford and Lloydminster (Subdivision B). Subdivision A is RCMP Headquarters for the province. It is located in Regina and was grouped with Subdivision D.

RCMP boundaries do not correspond to the Census boundaries or groupings established to analyze socio-demographic data (refer to Figure 2 for RCMP subdivision groupings). Consequently, crime rates and comparisons were only possible at the provincial level (for reserve, urban and rural areas).

Incident-Based UCR Survey (UCR II)

Extensive re-development work was initiated in 1984 to expand the information collected from the incident-based UCR Survey (UCR II). This survey allows detailed examination of accused and victim characteristics as well as characteristics of the incident itself. The UCR II Survey began collecting incident-based data in 1988. By the end of 1997, 179 police agencies, representing 48% of the national volume of reported crime, were responding to the UCR II Survey. Coverage for this survey will continue to grow as more police agencies convert to the UCR II Survey.

Figure 2
Map of Saskatchewan Showing RCMP Subdivisions^a

^a The boundaries of each subdivisions are an approximate geographical representation.
 Source: F Division Headquarters, Royal Canadian Mountain Police (RCMP).

Incident-based UCR Survey data were used to examine accused, victim and offence characteristics for Prince Albert, Regina and Saskatoon². This database provides characteristics such as gender, age and Aboriginal status of both accused and victims. It also provides information on the number and type of offences.

The UCR II database provided information on the number and types of police-reported criminal incidents occurring in a 12-month period. Offences were grouped into six categories: violent offences, property offences, drug offences, weapons offences, impaired driving offences, and other *Criminal Code* offences (including administration of justice offences, prostitution, gambling, traffic violations, etc.) (see Appendix D for full descriptions of offence categories).

² Victim data from Saskatoon were excluded from the analysis because in 67% of cases, the victim's Aboriginal status was reported as unknown.

Other Federal Statutes and some Administration of Justice offences (Bail Violations, Failure to Appear and Breach of Probation) were not included in the analysis because there were significant proportions of cases where Aboriginal status was unknown.

The accused database provided specific information on individuals accused of committing an offence. Data included Aboriginal status, age, gender, and consumption of alcohol and/or drugs.

The incident database provided information on characteristics of the incident such as most serious weapon present, as well as location of the incident.

The victim database provided information on victims of violent crime. Offence categories include: homicide/attempt murder, sexual assault, serious assault, minor assault, robbery, and other violent offences (kidnapping, extortion, criminal harassment, etc.). Information was also available on the relationship between the accused and the victim and injuries to the victim.

1.2 Study Limitations and Measurement Issues

There are several general measurement issues related to the data used in this report. These issues should be kept in mind when interpreting the study findings.

1.2.1 Population Data

Census Population figures reflect the “usual residents” of an area, rather than the number of people who spend some part of the day in the area. Therefore, this number takes no account of the influx of the commuter and transient population on any given day. In addition, persons who live near a city (e.g., Aboriginal people living on nearby reserves) have not been counted in the population figures for the city. These individuals may inflate the number of crimes committed in the city, without being included in the population count.

The Census information relies uniquely on self-reported information on the different variables. As mentioned previously, more detailed information was collected through the 20% sample. There was only one incompletely enumerated Indian reserve in Saskatchewan (Big Head 124) for the 1996 Census.

1.2.2 Crime Data

The crime data in this report are based on police reports and do not include unreported crime. The Canadian component of the 1996 International Crime Victimization Survey indicated that only 55% of all criminal incidents were reported to the police (Besserer, 1998). Police-reported data represent a subset of crimes committed and may not be representative of all crimes committed. There is evidence that differences exist between those who report offences and those who do not report. A report by the Solicitor General of Canada and the Attorney General of

Alberta (1991) suggests that Aboriginal persons are less likely to report the commission of a crime than non-Aboriginal persons. As data on unreported crime were not available for this study, this issue cannot be addressed. Furthermore, in order to examine the differences between Aboriginal and non-Aboriginal accused, only cleared offences (where an accused has been identified) could be used. Since this represents a subset of reported offences, it may not be representative of all reported crime.

Discussion of offences (chapters 3 and 4) is based primarily on the “most serious offence” (MSO) for which individuals were accused. The MSO is based on the Seriousness Index of the Revised Uniform Crime Reporting (UCR) Survey Violation Coding Structure that defines seriousness in terms of length of maximum sentence and the degree of injury or threat of injury to the victim.

Analysis was based on incidents where at least one accused was identified. It cannot be determined clearly whether the Aboriginal status of these identified accused is an accurate representation of the Aboriginal status of all individuals who committed criminal offences. Police officers may treat Aboriginal people differently than non-Aboriginal people, which could result in more charges being laid against Aboriginal people (Solicitor General of Canada and Attorney General of Alberta, 1991).

Accused profiles do not provide characteristics of convicted offenders, but refer to individuals charged with the commission of an offence. The characteristics of accused individuals may differ from those of convicted offenders.

1.2.3 Definition of Aboriginal

1.2.3.1 Collection of Aboriginal Data in the 1996 Census of the Population

For the 1996 Census, “Aboriginal person” refers to those persons who reported identifying with at least one Aboriginal group (i.e., North American Indian, Métis, or Inuit), and/or those who reported being a Treaty Indian or a Registered Indian as defined by the *Indian Act* of Canada, and/or who were members of an Indian Band or First Nation. Aboriginal identity is self-reported in the Census data, whereas in the crime data self-reporting and/or police observation were used.

Chapter 2 examines those who identify with an Aboriginal group, including North American Indians, Métis, Inuit, and multiple Aboriginal responses, compared to individuals of non-Aboriginal identity. The identity dimension refers to an individual’s perception of his/her Aboriginal identity. This differs from ancestry, where Aboriginal status is based on the cultural group of an individual’s ancestors.

1.2.3.2 Collection of Aboriginal Data in Crime Statistics

The information on Aboriginal status in police-reported data is collected through police observation or by self-reporting by the accused or the victim. Which of the two practices is used is not standard in police forces, and may not be standard within the same police force/detachment. In addition, both ways of collecting the information are problematic. If police observation is used, there is no straightforward visible criteria by which Aboriginal status can be determined. This practice is difficult and may be inaccurate. If self-reporting is used, Aboriginal status information may be influenced by the reliability of the response. Criminal justice procedures are by their nature adversarial and the cooperation of those against whom actions are being taken is not assured. The probability of non-response or an inaccurate response from the accused seriously undermines the self-reporting approach. Although the reporting of this data element might not be completely accurate, it provides a general indication of the nature and extent of Aboriginal involvement in urban, rural and reserve crime in Saskatchewan.

Breakdowns of Aboriginal people at lower levels of aggregation (e.g., North American Indian, Métis or Inuit) were not done in Chapters 3 and 4 for two reasons. Firstly, due to differences within the police forces in their categorizing of Aboriginal persons, it is not always possible to further break down Aboriginal status. In addition, even if categories of Aboriginal individuals were available, these categories often differ among the various police forces. Secondly, since police observation is often the source of determining and capturing race, the reliability of further breakdowns is questionable.

2.0 Profile of the Aboriginal and Non-Aboriginal Populations of Saskatchewan

2.1 Introduction

This chapter provides a profile of Aboriginal and non-Aboriginal people in Saskatchewan in 1996. Based on the 1996 Census of population, variables examined include: proportion of Aboriginal persons in Saskatchewan, gender, age, education, employment, income, marital status, home language, and mobility.

In addition to examining differences on these variables between Aboriginal and non-Aboriginal persons in Saskatchewan, comparisons are made between Aboriginal and non-Aboriginal persons on reserve (including reserves and Indian settlements), in urban areas (areas with populations of 10,000 or more, including Regina, Estevan, Moose Jaw, Swift Current, Saskatoon, Yorkton, Prince Albert, North Battleford, and Lloydminster³), and in rural areas (including towns, rural municipalities, villages, resort villages, northern villages, northern towns, northern hamlets and unorganized territories with less than 10,000 population). Appendix C provides a list of reserves in Saskatchewan.

Comparisons within various regions across Saskatchewan are also examined. As illustrated in Figure 1 (Chapter 1), 11 regional groupings were made. These include: South East (CDs 1-2-5-6); South West (CDs 3-4-7-8); Central East (CDs 9-10-11); Central West (CDs 12-13); East (CDs 14-15); West 1 (CD 16); West 2 (CD 17); North East; North Central; North West; and, Athabasca (these four areas comprise CD 18).

2.2 Population

Based on the Census of the Population, there were 976,615 people in Saskatchewan in 1996. The largest proportion of people were located in urban areas (51%), in particular Saskatoon and Regina (20% and 18%, respectively of the Saskatchewan population). A further 45% of the population lived in rural areas, and 4% lived on Indian reserves or settlements.

The urban, reserve and rural populations are unevenly distributed across the province (see Table 1 in Appendix A). Overall, in 1996, approximately two-thirds of the Saskatchewan population was located in the South East and Central East regions (31% and 29%, respectively). These regions include the cities of Regina and Saskatoon. Similarly, the largest proportion of the urban population was located in the South East and Central East regions (38% and 41%, respectively). The largest proportion of the rural population was located in the South East (26%), followed by the Central East and East regions (18% each). In contrast, the largest proportion of the reserve population (31%) was in the northern regions of Saskatchewan (including the North East, North Central, North West and Athabasca). The next largest proportion was in West 2 (15%).

³ Although the population for Lloydminster is less than 10,000 (population of 7,580 in Saskatchewan), it is defined as a Census Agglomeration (CA) together with the part of Lloydminster within Alberta. Therefore, in this report it is considered an urban area.

2.3 Aboriginal Identity

As shown in Table 2, Aboriginal people represented 11% of the population in Saskatchewan in 1996⁴. The proportion of Aboriginal persons in Saskatchewan is substantially higher than in many other provinces/territories. Only the Northwest Territories, Yukon and Manitoba (62%, 20% and 12%, respectively) had higher proportions of Aboriginal persons in the population. Across Canada, the proportion of Aboriginal persons ranged from less than 1% in Prince Edward Island to 62% in the Northwest Territories.

Not surprisingly, in Saskatchewan, the proportion of Aboriginal persons differed in urban, reserve, and rural areas. Aboriginal persons represented 9% of the urban population and 7% of the rural population. In comparison, they represented 98% of the population on-reserve.

When looking at various regions within Saskatchewan, the proportion of Aboriginal persons increases as one moves north. Whereas Aboriginal people represented 11% of the total Saskatchewan population, they represented only 2% of the population within the South West region⁵. There were also smaller proportions of Aboriginal persons in the South East, Central East and Central West regions (7% of the populations were Aboriginal). However, in the remaining regions, there were larger proportions of Aboriginal persons. In the East region, 16% of the population was Aboriginal, in West 1 and West 2 approximately one-quarter of the population was Aboriginal (22% and 26%, respectively). In the northern regions, Aboriginal persons represented 80% of the population. In particular, 95% of the population in Athabasca and 94% in North West were Aboriginal.

In the 1996 Census, the following combinations of Aboriginal identity could be reported: North American Indian, Métis, Inuit, and mixed Aboriginal identity. In Saskatchewan, two-thirds (66%) of the Aboriginal population was North American Indian. Another 33% were Métis, and less than 1% were Inuit or had mixed Aboriginal identity.

As illustrated in Figure 3, in urban and rural areas, there were fairly similar proportions of North American Indians and Métis. In urban areas, 56% of the Aboriginal persons were North American Indian and 42% were Métis. In rural areas, there were lower proportions of North American Indians compared to Métis (41% and 58%, respectively). However, Saskatchewan's reserve population was relatively homogeneous. Almost all Aboriginal persons on reserve (98%) were North American Indian (also see Table 2).

⁴ As noted in chapter 1, the term "Aboriginal person" refers to an individual who reported in the 1996 Census that they identified with an Aboriginal group, including North American Indian, Métis, Inuit, or mixed Aboriginal identity.

⁵ Two reserves in this region were added into the rural area because the numbers were too small to examine separately.

Figure 3
Breakdown of Aboriginal Population, Saskatchewan, 1996

Source: 1996 Census of the Population, 20% Sample, Statistics Canada.

2.4 Gender

In 1996, there were fairly equal proportions of males and females in both the Aboriginal and non-Aboriginal populations (49% and 50%, respectively were male). This did not differ substantially in urban, on-reserve and rural areas. There were slightly lower proportions of Aboriginal males in urban areas (47%), as compared to on-reserve (52%) and rural areas (49%). Among non-Aboriginal persons, there were slightly lower proportions of males in urban areas and on-reserve (48% each), compared to rural areas (51%). These findings were similar across regions (see Table 3).

2.5 Age

On average, Aboriginal people in Saskatchewan tend to be younger than the non-Aboriginal population. In 1996, the median age was 19 for Aboriginal persons, compared to 36 for non-Aboriginal persons. As shown in Figure 4, approximately one-third (35%) of Aboriginal people were under the age of criminal responsibility (12 years of age), compared to 16% of non-Aboriginal persons. Further, the proportion of persons within the young offender age category (12 to 17) is slightly higher among Aboriginal than non-Aboriginal persons (13% versus 10%). This category can be expected to increase in future years as the younger cohort (under 12) ages. In contrast, the largest proportion of non-Aboriginal persons were 55 years of age or older (24% compared to 7% of Aboriginal persons).

Figure 4
Age Distributions for Aboriginal and non-Aboriginal Population, Saskatchewan, 1996

Source: 1996 Census of the Population, 20% Sample, Statistics Canada.

In general, these differences were similar across urban, on-reserve and rural areas and among the regions (see Table 4).

These differences in age between Aboriginal and non-Aboriginal persons support findings from other reports (e.g., Trevethan, 1993; Wolff, 1991), and may be attributable to the higher birth rate and shorter life expectancies for Aboriginal people.

2.6 Education

As illustrated in Figure 5, some educational differences existed between Aboriginal and non-Aboriginal persons in Saskatchewan in 1996. Overall, Aboriginal persons tended to have lower educational levels than non-Aboriginal persons.⁶ Almost one-quarter (23%) of Aboriginal persons had less than a grade 9 education, compared to 12% of non-Aboriginal persons. Further, fewer Aboriginal persons had attended university (14% versus 22% of non-Aboriginal persons). Similar proportions had grade 9 to 13 (42% and 40%, respectively) and college/trades instruction (21% and 25%, respectively). Since the Aboriginal people tend to be younger than the non-Aboriginal population, age may be a factor in these differences.

⁶ The analysis in this section refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed.

Figure 5
Highest Level of Educational Achievement for Aboriginal and non-Aboriginal Persons aged 15 and over, Saskatchewan, 1996

Source: 1996 Census of the Population, 20% Sample, Statistics Canada.

Differences in education level between Aboriginal and non-Aboriginal persons were less evident in urban areas (Table 5). Both Aboriginal and non-Aboriginal persons had higher levels of education in urban areas, however there were still larger proportions of Aboriginal than non-Aboriginal persons with less than a grade 9 education (14% versus 9%). In rural areas, 26% of Aboriginal persons had less than a grade 9 education, compared to 16% of non-Aboriginal persons. On-reserve, one-third of Aboriginal persons (32%) had less than a grade 9 education.

In southern regions, Aboriginal persons had higher levels of education than in the north. For instance, in the northern regions of Athabasca, North Central, North East and North West areas, over one-third (37%) of Aboriginal persons had less than a grade 9 education. In particular, 56% of Aboriginal persons in Athabasca had less than grade 9. In other northern areas, it ranged from 34% to 36%. In contrast, in the South East, South West, Central East and East regions, Aboriginal persons with less than grade 9 ranged from 14% to 18%.

Males and females did not differ substantially in educational level. Within the Aboriginal population, 25% of males and 22% of females had less than grade 9. Differences were primarily found in rural areas (28% versus 24%) and on-reserve (34% versus 30%). There were no differences in urban areas. Among non-Aboriginal persons, 13% of males and 11% of females had less than grade 9. Differences were primarily found in rural areas (18% versus 14%).

The above-noted educational differences between Aboriginal and non-Aboriginal persons are not as large as was found in the past. According to the 1986 Census, about twice as many Aboriginal as non-Aboriginal persons in Regina and Saskatoon had less than a grade 9 education (Trevethan, 1993). Based on the 1996 Census, in these urban areas, although Aboriginal persons still had lower education levels than non-Aboriginal persons, this was less pronounced than in 1986 (13% versus 8% in Regina, and 14% versus 8% in Saskatoon).

2.7 Employment

As shown in Table 6, the percentage of individuals 15 years of age and over who were in the labour force⁷ (including employed and unemployed individuals) in 1996 differed for the Aboriginal and non-Aboriginal populations. More than two-thirds (69%) of non-Aboriginal persons in Saskatchewan were considered to be in the labour force, compared to just over one-half (51%) of Aboriginal persons. On-reserve, fewer Aboriginal persons were in the labour force (43% compared to 70% of non-Aboriginal persons).

In southern regions, larger proportions of Aboriginal people were in the labour force than in the north. In the northern regions of Athabasca and the North East, as well as in the Central West, about 40% of the Aboriginal persons were in the labour force. However, in the South West, South East, and East regions, the proportion of Aboriginal persons in the labour force was higher (64%, 56% and 55%, respectively). In contrast, there were higher proportions of non-Aboriginal persons in the labour force in the northern regions, particularly in the North West and North Central (84%, and 82%, respectively).

Unemployment rates for Aboriginal and non-Aboriginal people differed substantially in Saskatchewan. The unemployment rate for Aboriginal people was more than four times that of non-Aboriginal persons. Among Aboriginal persons, the unemployment rate was 26% (meaning that 26% of the Aboriginal population in the labour force was unemployed), compared to 5.9% for non-Aboriginal persons.

As illustrated in Figure 6, this difference was more pronounced in rural areas. In rural areas, the unemployment rate for Aboriginal people was almost five times that of non-Aboriginal persons (23% versus 4.9%). In urban areas, although differences among Aboriginal and non-Aboriginal persons were still substantial, they were less pronounced than in rural areas (almost four times – 25.7% versus 6.8%). On reserves, the Aboriginal unemployment rate was two times the non-Aboriginal unemployment rate (29.5% versus 12.9%).

⁷ The term “labour force” refers to all individuals aged 15 and over, excluding institutional residents, who were either employed or unemployed in the week (Sunday to Saturday) prior to Census Day.

Figure 6
Unemployment Rate for Aboriginal and non-Aboriginal population aged 15 and over, Saskatchewan, 1996

Source: 1996 Census of the Population, 20% Sample, Statistics Canada.

The unemployment rate was lower for both Aboriginal and non-Aboriginal persons in the South West (13.8% versus 4.3%) and Central West (17% versus 3.9%) regions. It was higher for Aboriginal persons in West 1 (33.5%) and the North East (32.5%) regions. Differences between Aboriginal and non-Aboriginal persons were most evident in the West 1 region, where the Aboriginal unemployment rate was almost 5½ times the non-Aboriginal unemployment rate.

Gender differences in unemployment rates were also evident in Saskatchewan. The unemployment rate for Aboriginal females was about 3½ times that of non-Aboriginal females (22.3% versus 5.9%). This ratio was similar in urban, rural and reserve areas, although rates varied slightly.

The unemployment rate among males, however, differed by area. Overall, the unemployment rate for Aboriginal males was almost 5 times that of non-Aboriginal males (28.9% versus 5.8%). These differences were most pronounced in rural areas, where the unemployment rate was almost 6 times higher for Aboriginal than non-Aboriginal males (26.7% versus 4.6%). On reserves, the unemployment rate was the highest for both Aboriginal and non-Aboriginal males (34.3% versus 16.3%). Similar to the ratio between Aboriginal and non-Aboriginal females in urban areas, the unemployment rate for Aboriginal males in urban areas was about 3½ times that of non-Aboriginal males (26.5% versus 7.1%).

2.8 Income

Differences in reported income between Aboriginal and non-Aboriginal persons were pronounced in Saskatchewan (Table 7). The average income among Aboriginal people in Saskatchewan was about one-half (54%) that of non-Aboriginal persons. In 1996, the average income for Aboriginal persons was \$12,731, whereas it was \$23,431 for non-Aboriginal persons.

The differences in average incomes between Aboriginal and non-Aboriginal people were most pronounced on reserves. On reserves, Aboriginal persons earned 45% of the average income of non-Aboriginal persons (\$9,963 and \$22,312). It should be noted that non-Aboriginal people on-reserve are often employed in specific occupations (e.g., health care) which could explain these differences in average income. In urban areas, the average income among Aboriginal persons was slightly more than one-half (57%) that of non-Aboriginal persons (\$14,246 and \$25,157, respectively). In rural areas, Aboriginal persons earned an average income of \$14,165 compared to \$21,489 for non-Aboriginal persons (66%).

Differences in average income were most evident in the Central West and northern regions, where the average income for Aboriginal persons was less than one-half that of non-Aboriginal persons (45%). In the Central West, the average income for Aboriginal persons was the lowest in the province (\$10,462 versus \$23,172 for non-Aboriginal persons). In the four northern regions combined, the average income was \$11,930 for Aboriginal persons versus \$26,323 for non-Aboriginal persons.

The average income was higher for males than females in both the Aboriginal and non-Aboriginal populations. However, Aboriginal males earned approximately one-half (49%) the average income of non-Aboriginal males who reported income in Saskatchewan (\$14,360 versus \$29,299). Aboriginal females, on the other hand, earned almost two-thirds (64%) the average income of non-Aboriginal females who reported income (\$11,226 versus \$17,548). It should be kept in mind that the average income is based on individuals who reported receiving some income in the year in question.

As shown in Table 8, when looking at the source of income for Aboriginal and non-Aboriginal persons in the province, the most common source was government transfer payments such as employment insurance, social assistance, child benefits, etc.⁸. Eighty-three percent of Aboriginal adults and 71% of non-Aboriginal adults in Saskatchewan received government transfer payments in 1996. However, a lower proportion of Aboriginal persons received wages and salaries compared to non-Aboriginal persons (52% versus 64%). Additionally, a larger proportion of Aboriginal persons received other income such as periodic support from persons not in the household, child support, alimony, etc. (35% versus 4%). Fewer Aboriginal persons received self-employment income (4% versus 19%) and investment income (4% versus 34%).

Some differences were evident among urban, rural and reserve areas. In particular, a very large proportion of Aboriginal persons on reserves received other income (83% versus 17% of non-

⁸ It should be noted that a person can have or report more than one source of income. Therefore, totals do not add to 100%.

Aboriginal persons). In rural areas, although not to the same degree, the differences were also notable (12% versus 3%). In urban areas however, there were no substantial differences in the proportion of Aboriginal and non-Aboriginal persons receiving other income (6% versus 5%).

In terms of salary, the largest discrepancy between Aboriginal and non-Aboriginal persons occurred on reserves. While 44% of Aboriginal persons received a salary or wage, this was the case for almost three-quarters (72%) of non-Aboriginal persons. In urban areas, the difference was also large (56% versus 70%). However, in rural areas, the same proportion of Aboriginal and non-Aboriginal persons received a salary or wage (58% each). Finally, differences between Aboriginal and non-Aboriginal persons in self-employment income were most noticeable in rural areas (6% versus 29%), compared to reserve (2% versus 5%) and urban (3% versus 10%) areas.

Differences in source of income were most evident in the Central West and Athabasca regions, where the proportion of Aboriginal persons reporting wages and salaries as a source of income was considerably lower than for non-Aboriginal persons. For instance, in the Central West region, a little more than one-third (37%) of Aboriginal persons reported wages and salaries as a source of income compared to 59% of non-Aboriginal persons. In the northern region of Athabasca, 44% of Aboriginal persons declared wages and salaries as a source of income compared to 96% of non-Aboriginal persons.

For government transfer payments, the proportions are similar across all regions of Saskatchewan: there were proportionally more Aboriginal persons reporting receiving government transfer payments compared to non-Aboriginal persons (see Table 8 for more details).

The proportion of Aboriginal persons reporting receiving other income was generally higher than the proportion of non-Aboriginal persons in most regions of the province. However, the proportion was highest in the Central West region (75% versus 3% for non-Aboriginal persons), and lowest in the South West region, where 14% of Aboriginal persons received other income compared to 4% of non-Aboriginal persons.

Across the province, lower proportions of Aboriginal persons reported receiving wages and salaries. However, in the South West of the province, slightly more Aboriginal persons reported receiving wages and salaries compared to non-Aboriginal persons (62% versus 60%). Additionally, the lowest proportion of Aboriginal persons receiving wages and salaries in the province was in the Central West region where slightly more than one-third (37%) of Aboriginal persons received wages and salaries compared to 59% of non-Aboriginal persons.

The proportion of Aboriginal and non-Aboriginal persons receiving self-employment income and investment income were similar across the province: lower proportions of Aboriginal persons compared to non-Aboriginal persons reported receiving those sources of income in 1996 (see Table 8 for more details).

2.9 Marital Status

As shown in Figure 7, fewer Aboriginal than non-Aboriginal persons were married or living in a common-law relationship (aged 15 and over). Overall, 47% of Aboriginal persons in Saskatchewan were married, compared to almost two-thirds of non-Aboriginal persons (62%). This did not differ substantially in urban (41% versus 58%), rural (51% versus 66%) or reserve (51% versus 65%) areas (Table 9). This pattern held across the regions. These differences may be due to the fact that the Aboriginal population tend to be younger than the non-Aboriginal population, as shown in Section 2.5.

Figure 7
Percentage of Persons aged 15 and over who are married, Saskatchewan, 1996

Source: 1996 Census of Population, 20% Sample, Statistics Canada.

2.10 Home Language

Overall, 22% of Aboriginal persons in Saskatchewan reported an Aboriginal home language⁹ (Table 10).

⁹ The term “home language” refers to the language spoken most often at home by the individual at the time of the Census.

There was considerable variation across the province. A very small percentage of Aboriginal persons in urban areas reported an Aboriginal home language (4%). In rural areas, this increased to 23%, and on-reserve, 41% of persons reported an Aboriginal home language.

As shown in Figure 8, the proportion of Aboriginal persons reporting an Aboriginal language was considerably higher in the northern regions of Saskatchewan. In the Central West, approximately one-third (31%) of the Aboriginal persons reported an Aboriginal home language. In the northern region, over one-half (59%) of Aboriginal persons reported an Aboriginal language as their home language. This was particularly evident in Athabasca, where 94% of Aboriginal persons reported an Aboriginal language.

Figure 8
Aboriginal Population speaking an Aboriginal Home Language, Saskatchewan, 1996

Source: 1996 Census of Population, 20% Sample, Statistics Canada.

2.11 Mobility

As illustrated in Table 11, non-Aboriginal persons were less mobile than Aboriginal persons. In 1996, 85% of non-Aboriginal persons in Saskatchewan were at the same addresses as the previous year compared to more than two-thirds (69%) of Aboriginal persons. Further, more than one-half (59%) of non-Aboriginal persons were at the same address as five years previously, compared to 37% of Aboriginal persons.

Aboriginal persons in urban areas were more mobile than those in rural areas or on-reserve. In urban areas, 57% of Aboriginal persons were at the same address as the previous year, and about

one-fifth (22%) were at the same address as five years previously. In rural areas and on reserve, about three-quarters (73% and 79%, respectively) were at the same address as the previous year, and almost one-half (44% and 49%, respectively) as five years previously.

Non-Aboriginal persons in rural areas were less mobile than those in urban areas or on-reserve. Eighty-nine percent (89%) of non-Aboriginal persons in rural areas were at the same address as the previous year, compared to 81% in urban areas and 66% on reserves. In the northern regions, there was less mobility among Aboriginal persons, but more mobility among non-Aboriginal persons. In Athabasca, North East and North West regions, about 80% of the Aboriginal persons were at the same address as the previous year. However, among non-Aboriginal persons, 47% in Athabasca and 70% in the North West were at the same address as the previous year. Interestingly, in the Central West region, a fairly large proportion of Aboriginal persons were at the same address as the previous year (79%).

3.0 Comparison of Crime on Reserves, Rural and Urban Areas

3.1 Introduction

This chapter examines crime in the province of Saskatchewan, comparing crime on reserves and in rural and urban areas, for 1997. Data for this section of the report were extracted from the aggregate Uniform Crime Reporting (UCR) Survey and detailed aggregate data on reserves and rural areas were provided by the RCMP.

This chapter examines various offence groupings as well as breakdowns for male/female and adult/young offenders. Offence groupings included violent offences, property offences, other *Criminal Code* offences, and federal statute offences¹⁰. A more detailed description of offence groupings can be found in Appendix D.

Urban areas (more than 10,000 population) in this chapter consist of the municipal forces of Estevan, Moose Jaw, Prince Albert, Regina and Saskatoon. Reserves were grouped according to their respective RCMP subdivision (see Appendix C for a complete list of reserves included in this analysis). All other areas policed by a municipal police force or a RCMP detachment were grouped into rural areas (less than 10,000 population) according to the subdivision boundaries provided by the RCMP (see Figure 2 in Chapter 1 for a detailed map of subdivisions).

Since there were no substantial differences among the different subdivisions, the analysis for this chapter is based solely on the provincial level. The basis for comparison was reserves versus rural and urban areas. However, in subdivisions with no urban areas (e.g., subdivisions B, F and G), the comparison was done between reserves and rural areas. Consequently, the following similarities and differences among all three areas can be applied to most RCMP subdivisions.

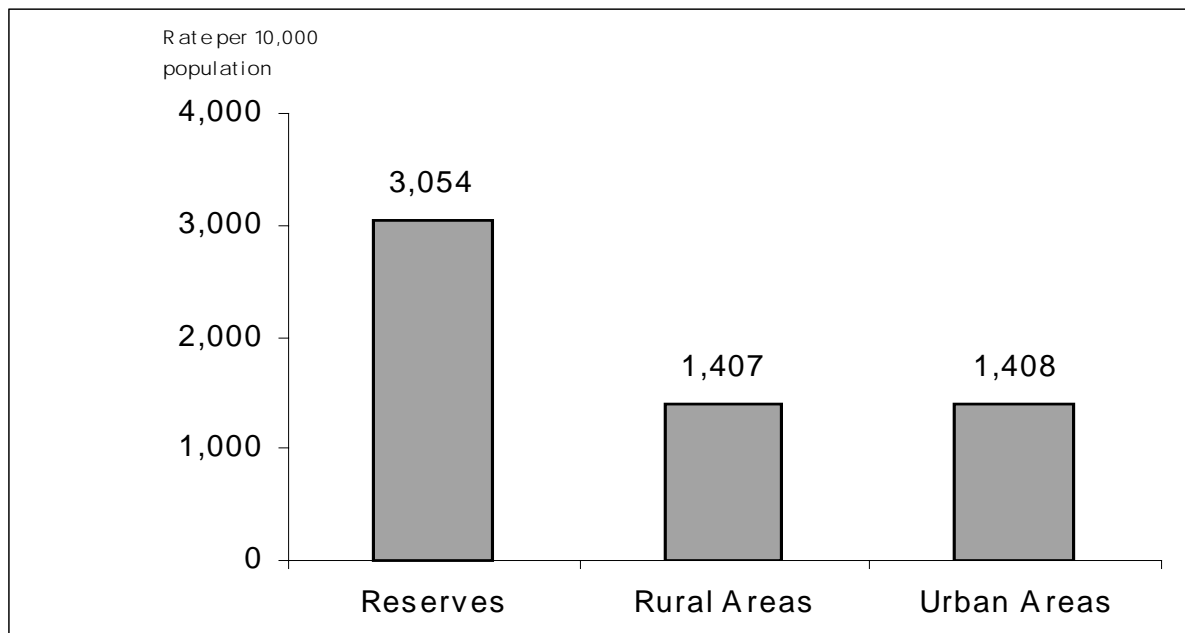

3.2 Crime Data

Crime rates in Saskatchewan in 1997 were higher than the national rate¹¹. In 1997, there were 1,472 offences per 10,000 population in Saskatchewan compared to 920 offences per 10,000 population nationally. Although the largest proportion of offences in Saskatchewan were reported in urban areas (49%), as illustrated in Figure 9, crime rates differed from one area to the other in Saskatchewan. Crime rates per 10,000 population were considerably higher on reserve (3,054) than in urban areas (1,408) or rural areas (1,407) (also see Table 12).

¹⁰ Violent offences include homicide/attempt murder, sexual assault, serious assault, minor assault, robbery and other violent assaults (such as abduction and kidnapping); property offences include break and enter, theft, fraud and other property offences (such as possession of stolen goods and mischief); other *Criminal Code* offences include offensive weapons offences, impaired driving offences, administration of justice offences and other *Criminal Code* offences (such as prostitution and dangerous operation of a motor vehicle); and federal statutes include drug offences and other federal statutes offences (such as Customs Act and Excise Act).

¹¹ It should be noted that rates were calculated using 1996 Census of Population data, as 1997 estimates by area (reserve, urban and rural) were not available.

Figure 9
Crime Rates, Saskatchewan, 1997^a

^a Rates were calculated using 1996 Census of Population data.

Sources: Aggregate Uniform Crime Reporting Survey (CCJS), Statistics Canada, OSR System (RCMP), and 1996 Census of Population.

The nature of crime on-reserve differs from that which characterizes crime in rural or urban areas. A much higher proportion of violent offences was found on reserves compared to urban or rural areas. As shown in Table 12, one-fifth (22%) of offences reported on reserves were violent offences, compared to 11% in urban areas and 10% in rural areas. On the other hand, there were substantially more property offences reported in urban areas (65%) compared to rural areas or reserves in Saskatchewan (51% and 37%, respectively). The proportion of “*Other Criminal Code*” offences (such as impaired driving offences, administration of justice offences and offensive weapons offences) was slightly lower on reserves (32%) than in rural areas (35%), but higher than in urban areas (22%). Finally, there were higher proportions of federal statute offences on reserves (9%), compared to rural (5%) or urban (2%) areas.

Another way of examining crime on reserves is through rates. As shown on Figure 10, crime rates for all offence categories were higher on-reserve compared to rural or urban areas. Violent offence rates were five times higher on-reserve (678 per 10,000 population) compared to rural (135) and urban (149) areas. For property offences, there were smaller differences between reserve (1,124) and urban (917) or rural (713) areas. “*Other Criminal Code*” offence rates were twice as high on-reserve (970) compared to rural (496) or urban (313) areas. For Federal Statute offences (such as drug offences), rates were almost five times higher on-reserve compared to rural areas (282 versus 63) and ten times higher than the rate in urban areas (28).

Figure 10
Crime Rates by Offence Category, Saskatchewan, 1997^a

^a Rates are calculated using 1996 Census of Population data.

Source: Aggregate Uniform Crime Reporting Survey (CCJS), OSR System (RCMP), and 1996 Census of the Population.

3.3 Violent Offences

As noted above, there was a disproportionate percentage of violent offences reported on reserves in 1997. Twenty-two percent of all offences reported on reserves were violent offences compared to 11% in urban and 10% in rural areas. As shown in Table 12, violent offence rates per 10,000 population were significantly higher on reserves (678) than in urban or rural areas (149 and 135, respectively).

Figure 11 shows that the majority of violent offences reported on reserve and in urban and rural areas involved an assault (minor or serious). There were slightly more minor assaults in rural areas (70%) compared to the proportions of reserves (67%) or urban areas (51%). However the proportion of serious assaults was higher in urban areas (24%) compared to reserves (19%) or rural areas (16%). The proportions of sexual assaults in all three areas were the same (12% each) (also see Table 13). Robberies were more prevalent in urban areas: 12% compared to 1% in rural areas or reserves.

Figure 11
Proportion of Violent Offences, Actual Incidents, Saskatchewan, 1997

Source: Aggregate Uniform Crime Reporting Survey (CCJS) and OSR System (RCMP).

3.4 Property Offences

The proportion of property offences reported in urban areas (65%) was higher than the proportion reported in rural areas (51%) or on reserves (37%) in Saskatchewan. However, property offences rates per 10,000 population were higher on reserves (1,124) compared to urban (917) or rural (713) areas in Saskatchewan (Table 12).

Figure 12 shows that the majority of the property offences reported in urban and rural areas were theft (50% and 41%, respectively) while on reserves there were similar proportions of theft and break and enter (34% and 35%, respectively). A higher percentage of theft was reported in urban (50%) compared to rural areas (41%), and reserves (34%). In contrast, the proportion of break and enter reported was higher on reserves (35%) compared to rural or urban areas (21% and 24%, respectively) (Table 13).

There was a higher proportion of fraud offences reported in rural areas (9%) compared to urban areas (5%) or reserves (4%). Finally, almost one-third (30%) of all property offences reported in rural areas were other property offences (such as mischief). This proportion is slightly higher than that found on reserves (27%) or in urban areas (20%).

Figure 12
Proportion of Property Offences, Actual Incidents, Saskatchewan, 1997

Source: Aggregate Uniform Crime Reporting Survey (CCJS) and OSR System (RCMP).

3.5 “Other Criminal Code” Offences

“Other Criminal Code” offences include impaired driving offences, offensive weapons offences, administration of justice offences, and “other Criminal Code” offences, such as prostitution and trespassing (refer to Appendix D for detailed description of this offence category).

One in three offences reported in rural areas (35%) and on reserves (32%) were “Other Criminal Code” offences. This differs from the proportion reported in urban areas (22%). Offence rates for “Other Criminal Code” offences per 10,000 population were substantially higher on reserves (970) compared to rural (496) and urban areas (313) (Table 12).

Figure 13 illustrates that of all the “Other Criminal Code” offences reported in urban areas, almost one-half (40%) were administration of justice offences. This greatly exceeds the proportions on reserves (12%) and in rural areas (8%).

One-third (33%) of “Other Criminal Code” offences in rural areas were impaired driving offences. This proportion was higher than the proportion reported on reserves (21%) and in urban areas (12%). Finally, “Other Criminal Code” offences such as disturbing the peace and obstructing a peace officer accounted for almost two-thirds of all “Other Criminal Code”

offences reported on reserves (63%) and more than one-half of “*Other Criminal Code*” offences reported in rural areas (57%) (Table 13).

Figure 13
Proportions of *Other Criminal Code* Offences, 1997

Source: Aggregate Uniform Crime Reporting Survey (CCJS) and OSR System (RCMP).

3.6 Federal Statutes

In all three areas, federal statute offences comprised less than 10% of all incidents reported. Offence rates were higher on reserves (282 per 10,000 population) compared to rural (63) or urban (28) areas (Table 12).

There were substantial differences in the proportions of drug offences reported in the three areas. In urban and rural areas, drug offences accounted for one-half of all federal statutes offences reported (55% and 53%, respectively), compared to 10% on reserves (Table 13).

Of all federal statutes offences, between 45% and 90% were other federal statute offences such as offences to the *Immigration Act* and *Customs Act* (see Appendix D for list of federal statutes included in this category).

3.7 Accused Characteristics

Whereas the data examined in the previous pages provided information on actual incidents, the information provided in this section examines data on persons charged by the police.

3.7.1 Gender

Overall, 4 in 5 accused (80%) in the province were male (Table 14). However, there was a larger proportion of male accused in rural areas and reserves (85% and 81%, respectively) compared to urban areas (77%).

In Saskatchewan, the largest proportion of both males and females were accused of *Other Criminal Code* offences (45% and 43%, respectively). This was similar in urban (46% and 47%, respectively) and rural (47% and 39%, respectively) areas. On reserves, the largest proportion of males were accused of property and violent offences (31% and 30%, respectively) while for females, the largest proportion were accused of violent offences (30%) (Table 15).

As discussed in Sections 3.2 to 3.6, the largest proportion of incidents reported to the police were property offences, while when looking at persons, the largest proportion were accused of “*Other Criminal Code*” offences. This difference is because some offences are more likely to have an accused identified. For instance, some “*Other Criminal Code*” offences such as impaired driving offences and administration of justice offences are offences where an accused is more often identified.

As shown in Table 15, in urban areas, the proportions of males and females accused of different types of offences were similar. However, there were a few exceptions on reserves and in rural areas. For instance, on reserves, males were slightly more likely to be accused of a property offence than females (31% versus 26%). In contrast, almost one-fifth (19%) of females were accused of a federal statute offence compared to 12% of male accused. In rural areas, 38% of females were accused of a property offence compared to one-third (33%) of male accused. On the other hand, almost one-half (47%) of males were accused of an “*Other Criminal Code*” offence compared to 39% of female accused.

3.7.2 Adult versus Youth

Three-quarters (75%) of all accused in Saskatchewan were adults. However, in comparison to their proportion in the provincial population (10%), youth were over-represented among accused (25%). As shown in Table 16, the youth crime rate is slightly more than double the adult crime rate in Saskatchewan (1,052 versus 442 per 10,000 population). There was a slight difference in youth and adult crime rate on-reserve (1,517 versus 1,290), however, the youth crime rate was twice the adult crime rate in rural areas (739 versus 348), and almost three times higher in urban areas (1,331 versus 480).

Table 17 shows the differences on reserves versus urban and rural areas. In both urban (50%) and rural (53%) areas, the largest proportion of adults were accused of an “*Other Criminal Code*” offence. On reserves however, the largest proportion of adults were accused of a violent offence (34%).

In all three areas, the largest proportion of youth were accused of a property offence. Almost two-thirds of youth accused on reserves (65%) and in rural areas (63%) were accused of a property offence compared to 44% of youth in urban areas.

In the province, the youth crime rates for different offence types were consistently higher than the adult crime rates (Table 17). For instance, property offence rates for youth were almost five times higher than the adult rate (547 versus 114 per 10,000 population), federal statutes offences were three times higher (75 versus 25), while the differences were not as substantial for violent offences (126 versus 83) and “*Other Criminal Code*” offences (303 versus 220).

In urban areas, the proportions were similar to those described above. In rural areas, the only difference was found with “*Other Criminal Code*” offences where the adult crime rate was slightly higher than the youth rate (186 versus 151 per 10,000 population). On reserves, some differences were found. For instance, the rate for federal statute offences was almost six times higher for adults compared to youth (212 versus 38 per 10,000 population). Additionally, the violent offence rate (444 versus 251) as well as the other *Criminal Code* offence rate (403 versus 239) for adults was almost double that of youth. On the other hand, the property offence rate was four times higher for youth compared to adults (989 versus 231 per 10,000 population) (Table 17).

4.0 Urban Crime in Saskatchewan

4.1 Introduction

This chapter examines crime in the three largest urban centres in Saskatchewan (Regina, Saskatoon and Prince Albert) for 1997. Data for this section of the report were extracted from the incident-based Uniform Crime Reporting (UCR II) Survey. The profiles of accused and victims (for violent offences only) were examined, as were offence characteristics such as location of incident, use of weapons and use of alcohol and/or drugs during the commission of the offence. Offences examined include violent offences, property offences, drug offences, impaired driving offences, weapons offences, and “*Other Criminal Code*” offences^{12 13} (see Appendix D for definitions of offence groupings).

4.1.1 Socio-Demographic Data

The socio-demographic characteristics of the population of these three cities do not differ substantially from the data on urban centres presented in Chapter 2. Table 18 presents characteristics of the Aboriginal and non-Aboriginal population of these cities and provides more detailed information on gender, age, education, language, marital status, mobility, labour force participation and income, and source of income.

As mentioned previously, Aboriginal persons represented 11% of the population of Saskatchewan in 1996. The proportion of Aboriginal persons in Regina and Saskatoon was lower than the provincial proportion (7% and 8%, respectively). However, in Prince Albert, Aboriginal persons represented 26% of the population.

There were slightly more females than males among Aboriginal and non-Aboriginal populations in all three cities. Further, Aboriginal persons tended to be younger than non-Aboriginal persons. In 1996, the median age for Aboriginal persons ranged from 18 to 20 years of age in the three cities. In comparison, for non-Aboriginal persons the median ranged from 33 to 36 years of age.

Some educational differences existed between Aboriginal and non-Aboriginal persons in Regina, Saskatoon and Prince Albert¹⁴. For instance, larger proportions of Aboriginal persons aged 15 years and over had less than a grade 9 education (between 13% and 14%) compared to non-Aboriginal persons (between 8% and 11%). Further, fewer Aboriginal than non-Aboriginal persons had undertaken university studies.

¹² *Other Criminal Code* includes offences such as administration of justice offences, prostitution, gaming and betting, disturbing the peace, obstructing peace officer, and other *Criminal Code* traffic violations such as failure to stop or remain and driving while prohibited.

¹³ Offences such as Bail Violations, Breach of Probation and Failure to Appear were removed from the groupings since the proportion of cases where Aboriginal status was unknown was significant (between 69% and 99%).

¹⁴ The analysis is based on the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university studies completed.

Overall, less than 10% of Aboriginal persons reported an Aboriginal home language in Regina, Saskatoon and Prince Albert (2%, 5%, 8%, respectively).

Fewer Aboriginal than non-Aboriginal persons were married or in a common-law relationship in Regina, Saskatoon and Prince Albert. Almost 60% of non-Aboriginal persons aged 15 years and over in all three cities were married compared to less than one-half of Aboriginal persons.

Aboriginal persons in these cities tended to be more mobile than non-Aboriginal persons. One-quarter of Aboriginal persons in Regina and Prince Albert (25% and 27%) and 16% of Aboriginal persons in Saskatoon were at the same address as 5 years previously. In comparison, this was the case for approximately one-half of non-Aboriginal persons.

Unemployment rates for Aboriginal and non-Aboriginal persons differed considerably. In Regina and Saskatoon, the Aboriginal unemployment rate was almost 4 times higher than the non-Aboriginal rate (27% versus 7% in Regina and 26% versus 7% in Saskatoon). In Prince Albert, the unemployment rate for Aboriginal persons was almost 3 times that of non-Aboriginal persons (23% versus 8%).

Along with low employment rates, Aboriginal persons had lower average incomes. The average income for Aboriginal persons in these cities was slightly more than one-half the average income of non-Aboriginal persons.

When looking at source of income, smaller proportions of Aboriginal persons in Regina, Saskatoon and Prince Albert reported wages and salaries and investment compared to non-Aboriginal persons. However, larger proportions of Aboriginal persons in these three cities reported receiving government transfer payments (such as employment insurance, social assistance, and child benefits) as a source of income.

4.2 Accused Characteristics

4.2.1 Aboriginal Status

In 1997, Aboriginal accused were over-represented in all three urban centres compared to their proportion in the population. Of those accused with a known Aboriginal status, more than one-half (52%) were Aboriginal (Figure 14). The proportion of Aboriginal accused was considerably larger than their 9% proportion in the population (1996 Census of Population).

As shown in Figure 14, the proportions of Aboriginal accused exceeded their proportion in the population of each city. Aboriginal accused were most over-represented in Regina where the proportion of Aboriginal accused was 7 times higher than the proportion of Aboriginal persons living in that city (49% versus 7%). In Saskatoon, the proportion of Aboriginal accused was almost 6 times higher than their proportion in the population of that city (47% versus 8%). Finally, in Prince Albert, the proportion of Aboriginal accused was approximately 3 times higher than that of the Aboriginal population (74% versus 26%).

Figure 14
Proportion of Aboriginal Accused and Proportion of Aboriginal Population, 1997^{a b}

^a Excludes cases where Aboriginal status was unknown (Total 11%, Prince Albert 9%, Regina 12%, Saskatoon 15%).

^b Includes data from Prince Albert, Regina and Saskatoon.

Source: Incident-Based Uniform Crime Reporting Survey (1997), Canadian Centre for Justice Statistics; and 1996 Census of the Population.

4.2.2 Offence Types

In examining specific offence types, as illustrated in Figure 15, Aboriginal and non-Aboriginal accused were charged with similar types of offences. Both were more likely to be charged with property offences than any other offence type (52% and 51%, respectively). However, a slightly larger proportion of Aboriginal than non-Aboriginal accused were charged with other *Criminal Code* offences (16% versus 12%) and violent offences (24% versus 21%). On the other hand, a larger proportion of non-Aboriginal were accused of impaired driving offences (12% versus 5%).

Table 19 indicates somewhat similar patterns across the three cities. Unlike the other two cities, in Regina, the proportion of Aboriginal and non-Aboriginal persons accused of other *Criminal Code* offences was the same (13% each). In Prince Albert, a larger proportion of Aboriginal than non-Aboriginal persons were accused of property offences (56% versus 48%), but similar proportions of Aboriginal and non-Aboriginal persons were accused of violent offences (19% and 18%, respectively).

Figure 15
Offence Types for Aboriginal and non-Aboriginal accused, 1997^{a b}

^a Includes data from Prince Albert, Regina and Saskatoon.

^b Excludes cases where Aboriginal status was unknown (12%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

When looking at crime rates by offence types, there is an important discrepancy between Aboriginal and non-Aboriginal crime rates. Overall, the Aboriginal crime rate per 10,000 population for all three cities was 10 times higher than the non-Aboriginal rate (2,592 versus 238). The largest difference was found for other *Criminal Code* offences where the Aboriginal crime rate was 14 times higher than the non-Aboriginal crime rate (413 versus 29). The smallest difference was found for impaired driving offences where the Aboriginal rate was 5 times higher than the non-Aboriginal rate (142 versus 29). Table 19 provides a detailed breakdown by offence types and by city, where the differences are similar to that described above with one exception. In Regina, the largest difference was found in the violent offence rate where the Aboriginal rate was 15 times higher than the non-Aboriginal rate (887 versus 61).

Table 20 provides a breakdown of property offence types. As noted earlier, the largest proportion of both Aboriginal and non-Aboriginal persons were accused of a property offence. Among property offences, the largest proportions were for theft under \$5,000 (40% and 42%, respectively). Of those accused of property offences, proportionally more Aboriginal than non-Aboriginal persons were charged with possession of stolen goods (20% versus 13%) and break and enter (21% versus 14%). On the other hand, a larger proportion of non-Aboriginal than Aboriginal persons were charged with fraud (18% versus 7%). There were no substantial differences in the proportions of Aboriginal and non-Aboriginal individuals accused of other property offences.

With two exceptions, the patterns were similar across the three cities. In Regina, proportionally more non-Aboriginal than Aboriginal persons were accused of theft under \$5,000 (46% versus

37%). And in Prince Albert, there was a larger proportion of non-Aboriginal than Aboriginal persons accused of mischief (21% versus 10%).

As shown in Table 20, Aboriginal property offence rates for all three cities combined were 11 times higher than non-Aboriginal crime rates (1,340 versus 121 per 10,000 population). The largest difference was found in theft over \$5,000 where the Aboriginal rate was 19 times higher than the non-Aboriginal crime rate (56 versus 3 per 10,000 population). The smallest difference was found in arson where the Aboriginal rate was 4 times higher than the non-Aboriginal rate (4 versus 0 per 10,000 population). Similar patterns were found in the cities with a few exceptions: in Saskatoon, the largest difference was found in possession of stolen goods where the Aboriginal rate was 16 times higher than the non-Aboriginal crime rate for that offence type (233 versus 15). Additionally, the smallest difference in Regina was found in fraud offences where the Aboriginal rate was 3 times higher than the non-Aboriginal rate (73 versus 21 per 10,000 population).

Table 21 provides breakdowns for violent offences. Of those accused of violent offences, the largest proportion of both Aboriginal and non-Aboriginal persons were charged with minor assault (49% and 56%, respectively). A larger proportion of Aboriginal than non-Aboriginal persons were accused of robbery (13% versus 5%) and serious assault (29% versus 25%). In contrast, a larger proportion of non-Aboriginal than Aboriginal persons were charged with minor assault (56% versus 49%) and sexual assault (9% versus 4%). There were no substantial differences in the proportions of Aboriginal and non-Aboriginal individuals accused of homicide/attempt murder and other violent offences (such as kidnapping, hostage taking, abduction, extortion and criminal harassment).

Patterns were similar across the three cities except in Saskatoon, where the proportions of Aboriginal and non-Aboriginal persons accused of sexual assault (5%) and serious assault (23%) were the same (Table 21).

As shown in Table 21, the Aboriginal violent offence rate was 13 times higher than the non-Aboriginal rate (626 versus 50 per 10,000 population). The largest difference between Aboriginal and non-Aboriginal rates was found for robbery, where the Aboriginal rate was 41 times higher than the non-Aboriginal rate (81 versus 2). The smallest difference was found in sexual assault, where the Aboriginal crime rate was 7 times higher than the non-Aboriginal rate (28 versus 4). This was similar across the cities, with the exception of Saskatoon where the smallest difference in violent offence rates was found in other violent offences (such as kidnapping, abductions) where the Aboriginal crime rate was 5 times higher than the non-Aboriginal rate (16 versus 3).

4.2.3 Gender

Overall, in 1997, more than three-quarters (79%) of the accused were male. However, there was a greater proportion of Aboriginal than non-Aboriginal female accused (Figure 16). Whereas females accounted for 26% of Aboriginal accused, they accounted for 16% of non-Aboriginal accused in the three urban centres.

Figure 16
Gender of Aboriginal and non-Aboriginal Accused, 1997^{a b}

^a Includes data from Prince Albert, Regina and Saskatoon.

^b Excludes cases where Aboriginal status and gender were unknown (11%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

Table 22 shows that proportions of Aboriginal female accused compared to non-Aboriginal female accused in all three cities. Aboriginal female accused were most over-represented in Saskatoon (27% versus 14%). In Regina and Prince Albert, the proportions were slightly lower (25% versus 17% in Regina, and 28% versus 21% in Prince Albert).

Table 23 shows offence types by gender of the accused. Overall, males were more likely to commit a property offence than any other offence type. However, a slightly larger proportion of Aboriginal males were accused of a property offence than non-Aboriginal males (53% versus 50%). Additionally, a larger proportion of Aboriginal than non-Aboriginal males were accused of a violent offence (25% versus 21%). In contrast, a larger proportion of non-Aboriginal than Aboriginal males were accused of an impaired driving offence (13% versus 6%). For other offence types, the proportions were similar among Aboriginal and non-Aboriginal male accused. For the most part, the breakdowns by city were similar. One exception was in Saskatoon, where the proportions of Aboriginal and non-Aboriginal males accused of a property offence were the same (52%).

The trends are different among females. Although females in general tended to be accused of property offences more than any other offence type, a larger proportion of non-Aboriginal females were accused of a property offence (60% versus 49%). On the other hand, a larger proportion of Aboriginal females were accused of other *Criminal Code* offences (21% versus 11%) such as obstructing a peace officer. For the most part, breakdowns by city were similar. However, in Regina, a larger proportion of Aboriginal than non-Aboriginal females were accused of a violent offence (27% versus 21%) (Table 23).

Offending patterns among Aboriginal males and females were similar. They were charged with property offences (53% and 49%), violent offences (25% and 22%) and impaired driving offences (6% and 5%) in similar proportions. However, a larger proportion of Aboriginal females than Aboriginal males were accused of other *Criminal Code* offences (21% versus 14%). While the most common offence types were similar for non-Aboriginal males and females, the proportions differed: a smaller proportion of non-Aboriginal males than non-Aboriginal females were accused of a property offence (50% versus 60%), but higher proportions of impaired driving offences (13% versus 7%).

4.2.4 Age

As illustrated in Figure 17, Aboriginal accused tended to be younger than non-Aboriginal accused. In 1997, 85% of Aboriginal accused were less than 35 years of age compared to 74% of non-Aboriginal accused. Further, where 31% of Aboriginal accused were 12 to 17 years of age, 23% of non-Aboriginal accused were in that age group. Breakdowns by city were similar (Table 24). This may be explained by the differences in age distributions of the Aboriginal population of the province, as was shown in Section 2.5.

Table 24 provides a breakdown of offence types for all age groups. Aboriginal accused were generally younger than non-Aboriginal accused for all offence types in all three cities.

Figure 17
Age of Aboriginal and non-Aboriginal Accused, 1997^{a b}

^a Includes data from Prince Albert, Regina and Saskatoon.

^b Excludes incidents where Aboriginal status and age were unknown (12%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.3 Victim Characteristics

The incident-based UCR survey captures information on victims of violent crime. For the purpose of analysis, violent offences were grouped into the following categories: murder/attempt murder, sexual assault, serious assault, robbery, minor assault and other violent offences (see Appendix D for glossary). Table 25 provides information on selected Aboriginal and non-Aboriginal characteristics.

Victim data were not examined for Saskatoon because in 67% of the cases, the victim's Aboriginal status was reported as unknown.

4.3.1 Aboriginal Status

In 1997, Aboriginal people were over-represented among victims of violent crime in comparison to their population in the two cities. Although Aboriginal persons comprised 10% of the populations of Regina and Prince Albert combined, they comprised 42% of the victims of violent crime for that year (Figure 18). The Aboriginal victimization rate was almost 7 times higher than the non-Aboriginal victimization rate (685 versus 106 per 10,000 population) for those two cities in 1997.

In Regina, the proportion of Aboriginal victims was almost 6 times higher than their proportion in the population (40% versus 7%). The Aboriginal victimization rate was almost 9 times higher than the non-Aboriginal rate (870 versus 102 per 10,000 population). In Prince Albert, the proportion of Aboriginal victims was double their proportion in the population (53% versus 26%). In this city, the Aboriginal victimization rate was 3 times higher than the non-Aboriginal victimization rate (425 versus 136 per 10,000 population) (Table 26).

4.3.2 Violent Offence Types

Both Aboriginal and non-Aboriginal victims were most often victims of assault (either minor or serious assault). However, a larger proportion of Aboriginal than non-Aboriginal victims were victims of a serious assault (34% versus 23%). In contrast, a larger proportion of non-Aboriginal than Aboriginal persons were victims of robbery (12% versus 4%) and minor assault (50% versus 45%). Similar trends were found in each city (Table 26).

4.3.3 Gender

A larger proportion of Aboriginal victims were female, compared to non-Aboriginal victims, who were more evenly split between males and females. More than two-thirds of Aboriginal victims (69%) were female whereas there were similar proportions of male (52%) and female (48%) non-Aboriginal victims (see Figure 19).

Figure 18
Proportion of Aboriginal Victims and Proportion of Aboriginal Population, 1997^{a b c}

^a Excludes incidents where Aboriginal status of victim was unknown (Total 12%, Prince Albert 5%, and Regina 13%).

^b Data from Saskatoon were excluded from this analysis because in 67% of the cases, the victim's Aboriginal status was reported as unknown.

^c Includes data for Prince Albert and Regina.

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

As illustrated in Table 27, the largest proportion of both Aboriginal and non-Aboriginal females were victims of minor assault (51% and 56%, respectively). However, a larger proportion of Aboriginal than non-Aboriginal females were victims of serious assault (30% versus 17%). On the other hand, a larger proportion of non-Aboriginal females were victims of robbery (6% versus 1%). Breakdowns by city showed some differences. For instance, in Prince Albert, a larger proportion of Aboriginal than non-Aboriginal females were victims of sexual assault (21% versus 16%).

While the largest proportion of non-Aboriginal male victims were victims of minor assault (50%), the largest proportion of Aboriginal males were victims of serious assaults (43%). As shown in Table 27, a larger proportion of Aboriginal than non-Aboriginal males were victims of serious assault (43% versus 26%) and of homicide/attempt murder (4% versus 1%). A larger proportion of non-Aboriginal than Aboriginal males were victims of minor assault (50% versus 33%) and of robbery (16% versus 10%). For the most part, breakdowns by city were similar to that found in the overall total.

Figure 19
Aboriginal and non-Aboriginal Status and Gender of Victim, 1997^{a b}

^a Includes data from Prince Albert and Regina.

^b Excludes incidents where Aboriginal status was unknown (11%)

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.3.4 Age

As shown in Figure 20, Aboriginal victims tended to be slightly older than non-Aboriginal victims. The median age for Aboriginal victims was 23 while for non-Aboriginal victims it was 22. Twenty-eight percent of Aboriginal victims in Saskatchewan were 25-34 years old compared to 20% of non-Aboriginal victims (also see Table 25).

In Prince Albert, the median age for Aboriginal victims was 23 years of age and for non-Aboriginal victims, it was 22. In Regina, Aboriginal victims were older than non-Aboriginal victims (24 years old versus 21 years old).

Figure 20
Aboriginal and non-Aboriginal Status and Age Group of Victims, 1997^{a b}

^a Includes data from Prince Albert and Regina.

^b Excludes incidents where Aboriginal status and age of victim was unknown (11%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.3.5 Accused – Victim Aboriginal Status

In order to capture information on the Aboriginal status of the accused and the victim, data on violent offences were examined (only information on violent offences is available in the victim database). Additionally, it was necessary to examine incidents where one accused and one victim were identified in order to determine proper status.¹⁵ Figure 21 shows that Aboriginal persons were more likely to be victimized by Aboriginal accused (73%), and non-Aboriginal persons were more likely to be victimized by non-Aboriginal accused (87%).

¹⁵ This was done because some incidents may have involved more than one accused and/or one victim (approximately 10% of all incidents for both the accused and the victim databases). Consequently, in order to identify proper status for accused and victims, a sub-query was done to find incidents where one accused and one victim were identified.

Figure 21
Aboriginal Status of Victim compared to Accused, 1997^{a b}

^a Includes data from Prince Albert and Regina.

^b Excludes incidents where Aboriginal status of accused and victim were unknown (accused: 9%, victim 9%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.3.6 Accused – Victim Relationship

As illustrated in Figure 22, the largest proportion of Aboriginal victims were victimized by someone known to them, particularly spouses or ex-spouses (36%) or another member of their family (21%). In contrast, non-Aboriginal persons were victimized most often by a stranger (33%) or an acquaintance (28%). Furthermore, more Aboriginal than non-Aboriginal victims were living with the accused: slightly more than one-third (35%) of Aboriginal victims compared to 21% of non-Aboriginal victims. Similar patterns were found in both cities (also see Table 25).

These results may be due in part to the fact that there were larger proportions of Aboriginal female victims compared to male victims. Female victims tend to be victimized more often by someone they know, whereas males tend to be victimized more often by strangers (Janhevich, 1998; Trevethan & Samagh, 1992).

Figure 22
Relationship of Aboriginal and non-Aboriginal Accused to Victim, 1997^{a b}

^a Includes data from Prince Albert and Regina.

^b Excludes incidents where Aboriginal status and relationship to victims were unknown (19%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.3.7 Injury to the Victim

Aboriginal victims are more likely than non-Aboriginal victims to suffer some form of physical injury. Figure 23 shows that a larger proportion of Aboriginal victims (62%) suffered some form of physical injury (minor, major or death) compared to non-Aboriginal victims (49%). The majority of injuries to both Aboriginal and non-Aboriginal victims were reported as minor. However, almost one Aboriginal victim in ten (8%) suffered major injuries, compared to 4% of non-Aboriginal victims. The two cities reported similar findings (Table 25).

Figure 23
Level of Injury for Aboriginal and non-Aboriginal Victims, 1997^{a b}

^a Includes data from Prince Albert and Regina.

^b Excludes incidents where Aboriginal status and level of injury were unknown (16%)

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

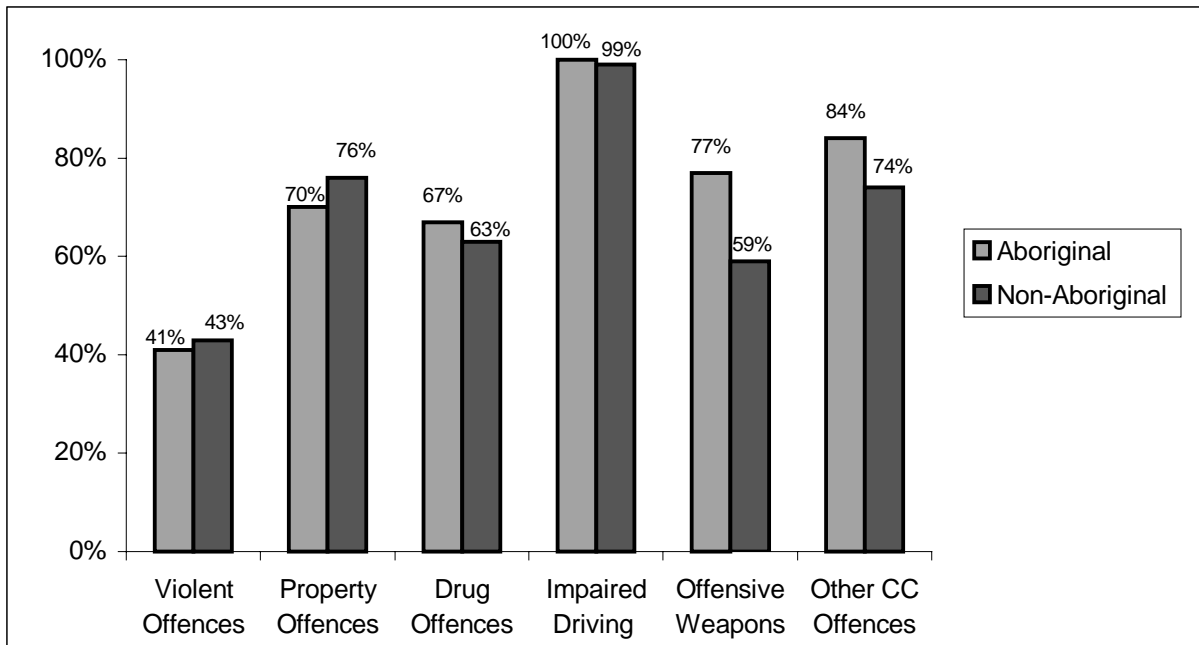

4.4 Offence Characteristics

4.4.1 Location of Incident

As shown in Table 28, the majority of both Aboriginal and non-Aboriginal accused committed offences in non-residential areas (67% for Aboriginal accused and 71% for non-Aboriginal accused).¹⁶ Figure 24 shows the proportion of offences committed in non-residential areas. However, more than one-half of Aboriginal and non-Aboriginal persons accused of committing violent offences committed them in private or commercial residences (59% and 57%, respectively): more violent offences occurred in private residences (such as households). Similar patterns were found across the three cities (Table 28).

¹⁶ Such as commercial/corporate places, parking lots, schools, public institutions, public transportation and connected facilities, streets, roads, highways and open areas.

Figure 24
Proportion of Incidents Occurring in Non-Residential^a Areas, 1997^{b c}

^a Such as commercial places, parking lots, schools, public institutions, public transportation and connected facilities, streets, roads, highways, and open areas (lakes, rivers, etc.).

^b Includes data from Prince Albert, Regina and Saskatoon.

^c Excludes incidents where Aboriginal status and location of incident were unknown (14%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.4.2 Use of Weapons

Information on most serious weapon used is captured only for violent offences. One in five violent offences reported to the police involved the use of a weapon. A larger proportion of Aboriginal accused used a weapon in the commission of an offence compared to non-Aboriginal accused (22% versus 13%). As shown in Figure 25, a larger proportion of Aboriginal accused used a sharp instrument (11%) such as a knife compared to non-Aboriginal accused (4%). For other types of weapons, there were no significant differences between Aboriginal and non-Aboriginal accused. However, a larger proportion of non-Aboriginal accused used physical force in the commission of an offence (85%) compared to Aboriginal accused (78%). Table 29 indicates similar findings in all three cities.

Figure 25
Use of Weapons by Aboriginal and non-Aboriginal Accused, 1997^{a b}

^a Includes data from Prince Albert, Regina and Saskatoon.

^b Excludes incidents where Aboriginal status and use of weapons were unknown (15%).

Source: Incident-Based Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

4.4.3 Alcohol and / or Drug Consumption

Overall, drugs and/or alcohol were present in a small proportion of offences.¹⁷ Based on police reporting of this information, 8% of offences committed by Aboriginal accused involved the consumption of alcohol and/or drugs prior to the incident. This was the case for 4% of offences committed by non-Aboriginal accused (Table 30). In particular, a larger proportion of Aboriginal than non-Aboriginal accused were reported to have used alcohol and/or drugs prior to the commission of a violent offence (30% versus 15%).

The findings in Regina and Saskatoon were similar to those described above.

¹⁷ Data from Prince Albert were removed from this analysis due to a large proportion of incidents where the field containing that information was left blank.

5.0 Conclusion

The findings in this report indicate that Aboriginal persons in Saskatchewan are over-represented among those charged with criminal offences. While the Aboriginal population represents 10% of the population of Prince Albert, Regina and Saskatoon, one-half of those accused, and almost one-half of those victimized were Aboriginal. Further, although major offence types differed on reserve, in urban and rural areas, crime rates on reserves were double those in urban and rural areas. These findings support previous reports which have found higher levels of Aboriginal involvement in crime (Royal Commission on Aboriginal Peoples, 1996).

These differences in Aboriginal involvement in the criminal justice system may be attributed to several socio-demographic variables presented in Chapter 2. The Aboriginal population is generally younger than non-Aboriginal population, has lower educational levels, has more than four times the unemployment rate of non-Aboriginal persons, and has substantially lower incomes than non-Aboriginal persons. These differences may be associated with an increased risk of criminal behaviour, or with higher chances of victimization.

¹ Refers to non-institutional data only.

² Due to missing data and rounding, not all totals will match total population.

³ Based on population 15+.

⁴ Totals will not equal 100% because one individual may have reported more than one source of income.

⁵ Income Data for rural Athabasca was not available because figures were too small to be expressed.

- Nil or zero.

Appendix D – Glossary

Census Terminology

Aboriginal identity refers to those persons who reported identifying with at least one Aboriginal group (i.e., North American Indian, Métis, or Inuit).

Aboriginal origin refers to those persons that indicated that they were of Aboriginal ancestry, and/or those who reported being a Treaty Indian or a Registered Indian as defined by the *Indian Act* of Canada and/or who were members of an Indian Band of First Nation.

Age refers to the age at last birthday (as of Census reference date, May 14, 1996). This variable was derived from the date of birth question which asks day, month and year of birth. Persons who were unable to give the exact date of birth were asked to give the best possible estimate.

Education refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non-university completed. It is only reported for the population 15 years of age and over, excluding institutional residents.

Gender refers to the sex of the respondent.

Home language refers to the language spoken most often at home by the individual at the time of the Census.

Institutional Resident refers to a resident of an “institutional” collective dwelling, other than staff members and their families. Institutional collective dwellings include orphanage and children’s homes, special care homes and institutions for the elderly and chronically ill, hospitals, psychiatric institutions, treatment centres and institutions for the physically handicapped, correctional and penal institutions, young offenders facilities and jails. Institutional data are not included in the reported data.

Labour force activity refers to the labour market activity of the population 15 years of age and over, excluding institutional residents, in the week (Sunday to Saturday) prior to Census Day. Respondents were classified as either employed, unemployed or not part of the labour force.

Marital status refers to the conjugal status of a person. Major categories include Married (including Common-Law), Separated, Divorced, Widowed and Never Married (Single). It is only reported for the population 15 years of age and over, excluding institutional residents.

Mobility 1 year ago refers to the person’s usual municipality or census subdivision (CSD) of residence on May 14, 1995, one year prior to Census Day.

Mobility 5 years ago refers to the person’s usual municipality of census subdivision (CSD) of residence on May 14, 1991, five years prior to Census Day.

Rural area refers to cities, towns, rural municipalities, villages, resort villages, northern villages, northern towns, northern hamlets, and unorganized territories with less than 10,000 population.

Sample data refers to the 20% sample, used in the 1996 census. Data were collected either on a 100% basis (i.e., for all households) or on a sample basis (i.e., from a random sample of households) with data weighted to provide estimates of the entire population. The information in this report was collected on a 20% sample basis and weighted up to compensate for sampling. Note that institutional residents are not included in the 20% sample.

Source of income refers to that component which constitutes the largest proportion of an income recipient's total income. The income sources are combined into five components: wages and salaries, self-employment (farm and non-farm), government transfer payments, investment income and other income.

Urban area refers to a city or a town with more than 10,000 population.

Geographic Terminology

Census Agglomeration (CA) is a large urban area (known as the **urban core**) together with adjacent urban and rural areas (known as **urban and rural fringes**) that have a high degree of social and economic integration with the urban core. A CA has an urban core population of at least 10,000, based on the previous census.

Census Division (CD) is the general term applied to areas established by provincial law which are intermediate geographic areas between the municipality (**census subdivision**) and the **province** level. Census divisions represent counties, regional districts, regional municipalities and other types of provincially legislated areas.

Census Metropolitan Area (CMA) is a very large urban area (known as the **urban core**) together with adjacent urban and rural areas (known as **urban and rural fringes**) that have a high degree of social and economic integration with the urban core. A CMA has an urban core population of at least 100,000, based on the previous census.

Census Sub-Division (CSD) refers to cities, towns, rural municipalities, villages, Indian reserves, Indian settlements, resort villages, northern villages, northern towns, northern hamlets, and unorganized territories.

Crime Terminology

Aboriginal refers to whether the victim or the accused is a descendant of Aboriginal peoples. This variable is based on self report or police observation.

Age refers to the information reported to the police regarding the date of birth (year/month/day) of both the accused and the victim. If the person's actual date of birth was not available, apparent age was estimated by the police officer.

Alcohol / drug use refers to the ingestion of alcohol or drugs to the extent of being impaired prior to the time of this incident.

Crime rate was based on the number of offences per 10,000 total population using data from the 1996 Census of Population.

Gender refers to the sex of victims and accused and includes male, female, unknown gender or if the accused is a company.

Incident refers to violations of the law that may involve several victims, accused and several different violations of the law. Traffic and non-traffic violations are scored as separate incidents and were not examined in this report. Two or more violations of the law (and their related victims and accused) are grouped into the same incident if they are committed by the same person or group of persons and if they are either:

- i) part of simultaneous or sequential actions that occur at the same place;
- ii) part of interrelated actions over a short period of time;
- iii) part of the same violent action repeated over a long period of time against the same victim(s) and only comes to the attention of the police at a later point in time.

Incident/Clearance status describes the status of an incident (i.e., unfounded or actual) and, if it has been determined an actual offence, describes its clearance status (i.e., not cleared, cleared by charge or cleared otherwise).

Location of incident describes the type of location where the incident took place, whether in a private, commercial or public locations.

Offences include all *Criminal Code* offences (except for Traffic violations) and Federal Statutes offences. Groupings were made as follows:

- a) Violent offences include homicide/attempt murder, sexual assault, serious assault, minor assault, robbery and other violent offences such as kidnapping, hostage taking, abduction, extortion and criminal harassment;
- b) Property offences include break and enter, theft (over and under \$5,000), fraud and other property offences such as arson, possession of stolen goods and mischief;
- c) Offensive Weapons offences include possession and/or use of explosives, prohibited and restricted weapons, firearm transfers/serial numbers, and other offensive weapons offences;
- d) Impaired driving offences include all impaired operation/related violations causing death or bodily harm, operation of a vehicle over 80 mg, and failure to provide breath and blood samples;
- e) Drug offences include possession, trafficking, importation, and cultivation of any narcotic, controlled or restricted drug;
- f) *Other Criminal Code* offences include some administration of justice offences (escape custody, prisoner unlawfully at large, offences against the administration of law and justice (Part IV), prostitution, gaming and betting, counterfeiting currency, disturbing the peace, indecent acts and public morals, obstructing peace officer, trespassing at night, threatening/harassing phone calls, offences against public order, sexual offences, public morals and disorderly conduct (Part VI), invasion of privacy (Part IV), disorderly houses, gaming and betting (Part VII), offences against the person and reputation (Part VIII), offences against the rights of property (Part IX), fraudulent transactions relating to contracts and trade (Part X), willful and forbidden acts in respect of certain property (Part XI), offences related to currency (Part XII), attempts, conspiracies and accessories (Part XIII), dangerous operation of motor vehicle, vessel or aircraft causing death or bodily harm, and *Other*

Criminal Code traffic violations such as failure to stop or remain and driving while prohibited;

(NOTE: In Chapter 3, Administration of Justice offences were examined and analyzed as a distinct category and include bail violations, escape custody and prisoner unlawfully at large).

- g) Federal Statutes offences include offences to the Controlled Drugs and Substances Act, Bankruptcy Act, Income Tax Act, Canada Shipping Act, Public Health Act, Customs Act, Competition Act, Excise Act, Immigration Act, Bank Act, Citizenship Act, etc.

Relationship of the accused to the victim refers to the nature of the relationship between a victim and an accused. This includes:

- i) spouse / ex-spouse: accused is the husband or wife (or former) through marriage or common-law;
- ii) parent: accused is the natural father or mother of the victim, or the legal guardian with legal custody and care of the child;
- iii) child is the natural offspring of the victim or the victim has the legal care and custody of the child;
- iv) other immediate: accused is the natural brother or sister of the victim or step, half, foster or adopted family brother or sister);
- v) extended family: includes all others related to the victim either by blood or by marriage;
- vi) close friend: accused is long-term and/or close (or intimate) relationship to the victim and includes ex-friends;
- vii) business relationship: relationship in which the workplace or business involved is the primary source of contact and includes fellow workers, business partners, employee-employer;
- viii) casual acquaintance: social relationship which is neither long-term nor close and includes known by sight only, neighbours, etc.;
- ix) stranger: accused is not known to the victim in any way but has been observed;
- x) unknown: the identity of the accused is not know or the relationship cannot be established.

A second field of this data element is whether or not the accused and victim are “presently living together”, which establishes further the nature of the relationship between the accused and the victim.

Rural areas refer to all areas with less than 10,000 population that are policed by a full-time municipal force or the Royal Canadian Mounted Police (RCMP).

Urban areas refer to all areas with more than 10,000 population that are policed by a full-time municipal police force only.

Victim refers to a person who is the target of violent/aggressive action or threat. A “violent” violation of the law indicates the use of aggressive action (with the intent to do harm) or the threat of such action by one person against another.

Violation refers to a contravention of the *Criminal Code* or other Federal and Provincial Statutes.

Weapon refers to anything used or intended for use that actually caused the most serious physical injury to the victim. This element includes:

- i) firearms: includes fully automatic, sawed-off rifles/shotguns, handguns, rifles and shotguns and other firearm like weapons (starter pistols, emergency flare guns, Daisy BB pistols, etc.);

- ii) sharp instruments: includes knives (kitchen knife, Swiss pocket knife, stilleto, switch blade), and other piercing cutting instruments (hatchets, razor blades, swords);
- iii) blunt instrument: includes any tool or article that is used to cause physical injury or death by use of a hitting or bludgeoning action (fireplace poker, candle stick holder, brick);
- iv) explosives: includes anything used to make an explosive device or; anything adapted to or to aid in causing an explosion or; any incendiary grenade, firebomb, molotov cocktail or other similar incendiary substance or device and a delaying mechanism or; other thing intended for use in connection with such a substance or device (i.e., hand grenade, blasting caps, dynamite, etc.);
- v) fire: when a fire is intentionally or accidentally set and causes injury or death to an individual;
- vi) physical force: use of one's body strength and/or action that is intended to cause bodily injury or death (i.e., choking, punching, pushing);
- vii) other weapon: any weapon that does not belong in any other category (i.e., device used to garret, poison or motor vehicle).
