Data in many forms

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered. Data are available on the Internet, compact disc, diskette, computer printouts, microfiche and microfilm, and magnetic tape. Maps and other geographic reference materials are available for some types of data. Direct online access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable database and retrieval system.

How to obtain more information

Inquiries about this product and related statistics or services should be directed to: Canadian Centre for Justice Statistics, Toll Free 1 800 387-2231, Statistics Canada, Ottawa, Ontario, K1A 0T6 or to the Statistics Canada Regional Reference Centre in:

Ordering/Subscription information

All prices exclude sales tax

Catalogue no. 85-205-XPE, is published annually as a standard paper product. The prices for delivery in Canada are \$42.00 and outside Canada for US \$42.00. Please order by mail, at Statistics Canada, Dissemination Division, Circulation Management, 120 Parkdale Avenue, Ottawa, Ontario, K1A 0T6; by phone, at **(613) 951-7277** or **1 800 700-1033**; by fax, at **(613) 951-1584** or **1 800 889-9734**; or by Internet, at order@statcan.ca. For changes of address, please provide both old and new addresses. Statistics Canada products may also be purchased from authorized agents, bookstores and local Statistics Canada offices.

This product is also available on the Internet as Catalogue no. 85-205-XIE for CDN \$32.00. Users can obtain single issues or subscribe at <http://www.statcan.ca/cgi-bin/downpub/feepub.cgi>.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner and in the official language of their choice. To this end, the agency has developed standards of service which its employees observe in serving its clients. To obtain a copy of these service standards, please contact your nearest Statistics Canada Regional Reference Centre.

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Symbols

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ʳ revised figures.

Note:

Year: All data are based on the calendar year unless otherwise specified.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences - Permanence of Paper for Printed Library Materials, ANSI Z39.48 - 1984.

Preface

The mandate of the National Justice Statistics Initiative is to provide information to the justice community and the public on the nature and extent of crime and the administration of civil and criminal justice in Canada. The operational arm of the Initiative is the Canadian Centre for Justice Statistics.

This *Canadian Crime Statistics* publication was prepared by Monique Poulin, Sylvain Tremblay and Rebecca Kong, Policing Services Program, Canadian Centre for Justice Statistics.

Acknowledgements

The Canadian Centre for Justice Statistics gratefully acknowledges the assistance of Canadian police agencies, the Canadian Association of Chiefs of Police and the Police Information and Statistics (POLIS) Committee in making this report possible. Special thanks are offered to the CCJS staff who provided comments, technical and clerical support in the preparation of this publication.

Chapter 1

Crime Statistics in Canada

1.1 Introduction

This publication provides a statistical summary of police-reported crime in Canada and the provinces/territories back to 1962. The bulk of the data presented in this publication are taken from the two Uniform Crime Reporting (UCR) databases with additional statistics from the Homicide Survey.

Included in this publication are the following categories of tables: standard crime tables at the national and provincial/territorial levels; an historical crime table dating back to 1962; a municipal table describing crime in census metropolitan areas (CMAs) with populations over 100,000; and, a set of tables using the Incident-based UCR Survey to describe characteristics of criminal incidents, their victims, and the accused persons. These tables include data on weapon use, the accused-victim relationship, and the age and sex of victims and accused.

1.2 Uniform Crime Reporting (UCR) Survey

The Canadian Centre for Justice Statistics (CCJS), in co-operation with the policing community, collects police-reported crime statistics through the UCR Survey. The UCR survey was designed to measure the incidence of crime in Canadian society and its characteristics.

The UCR Survey produces a continuous historical record of crime and traffic statistics reported by every police agency in Canada since 1962. UCR data reflect reported crime that has been substantiated through police investigation. Information collected by the survey includes the number of criminal incidents, the clearance status of those incidents and persons-charged information. The UCR Survey is considered to be a summary or aggregate type census, with data available for nearly 100 separate criminal offences.

The UCR Survey classifies incidents according to the most serious offence (MSO) occurring in the incident (generally the offence which carries the longest maximum sentence under the *Criminal Code of Canada*). In categorizing incidents, violent offences always take precedence over non-violent offences. For example, an incident involving both a breaking and entering offence and an assault is counted as an incident of assault. As a result of the MSO scoring rule, less serious offences are under-counted by the UCR Survey.

1.3 Revised (Incident-based) UCR Survey

Extensive re-development work was initiated in 1984 in order to expand the information collected from the UCR Survey. The Revised UCR Survey allows detailed examinations of accused and victim characteristics (e.g., age, sex, accused-victim relationship, level of injury and weapon causing injury), as well as characteristics of the incident itself (e.g., location, targets of violations, secondary violations, the presence of weapons, property type damaged or stolen, date and time). The survey generates a rich micro-database where incident, accused and victim variables can be linked and analyzed. This alternative method of data collection in which a separate statistical record is created for each criminal incident is known as an "incident-based" reporting system. Research questions and issues that previously could only be addressed through small sample surveys or case studies can now be undertaken using data from the Revised UCR Survey.

Coverage will continue to grow as more police agencies convert to the Revised UCR Survey. The first police respondents to report to the Revised UCR Survey were the Niagara Regional Police and Fredericton Police who began collecting incident-based data in 1988. By the end of 1998, 169 police agencies, representing 46% of the national volume of reported crime, were responding to the new Survey (see Table 4.1 for a list of Revised UCR Survey respondents).

1.4 Homicide Survey

In addition to the two UCR surveys, the CCJS collects detailed information on all homicide offences in Canada through the Homicide Survey. The Homicide Survey has been the primary mechanism for the collection of national homicide statistics since 1961. It provides detailed information about each homicide occurring in Canada, as well as the characteristics of the victims and the accused.

Homicide statistics are collected by the Homicide Survey as well as by both the aggregate and incident-based UCR surveys. Specific research queries regarding homicide occurrences and their circumstances are best addressed through the Homicide Survey which offers a greater range of variables than either of the UCR surveys.

1.5 Police Administration Survey

Another survey undertaken by the CCJS is the Police Administration Survey. In operation since 1962 and revised in 1986, this Survey collects information on police personnel and expenditures from all municipal and provincial police forces, as well as the RCMP. Personnel data are available by type of personnel (police, special constables, civilians) and by gender. Police expenditure information is available by major financial category (e.g., salaries, wages and benefits, other operating costs and total operating expenditures). Two reports are produced annually from the Police Administration Survey: Police Personnel and Expenditures in Canada (Cat. no. 85F0019XPE) and Crime and Police Resources in Canadian Municipalities (Cat. no. 85-223-XPE).

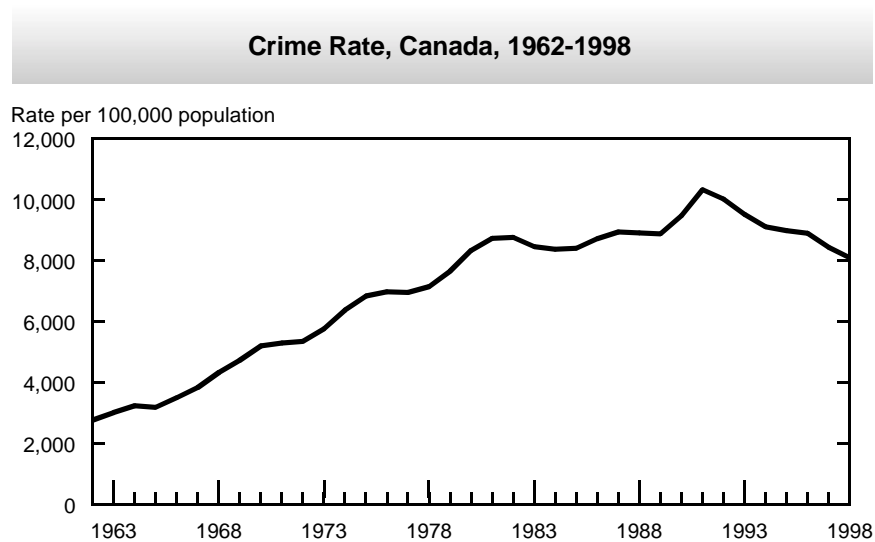

1.6 Victimization Surveys

Criminal victimization surveys are undertaken by Statistics Canada on a cyclical basis to produce data which supplement official police statistics (UCR data). Statistics Canada conducted a victimization survey as part of the General Social Survey in 1988. The survey was repeated in 1993 and the results from the 1999 Survey are scheduled for release in Spring 2000. Victimization surveys contain information on a greater number of criminal incidents than the UCR system since victims are asked to describe all incidents: those incidents which were reported to the police as well as those which were not reported. However, victimization surveys by their nature exclude the collection of information on homicide, "victimless" crimes (prostitution, drugs, and gambling), crimes committed against commercial or public property, and crimes committed against children. In general, the relationship between victimization survey results and official police statistics in measuring the real incidence of crime in society is still being defined; however, these two survey methods produce complementary statistical perspectives on the same general phenomenon of crime.

Chapter 2

Overview of Crime in Canada, 1998

The crime rate, based on crimes reported by police, fell for the seventh consecutive year in 1998. The 4.1% drop resulted in the lowest rate in almost 20 years. Most crimes declined in 1998, including homicide, attempted murder, sexual assault, robbery, break and enter, motor vehicle theft and impaired driving. Among the few crimes showing an increase were drug offences (+6.0%) and prostitution (+1.7%).

Interpreting Police-reported Crime Data

The Canadian Centre for Justice Statistics (CCJS) collects crime data from police forces according to a nationally approved set of rules and definitions. However, many factors could influence official crime statistics. These include reporting by the public to the police, reporting by police to the CCJS and the impact of new initiatives such as changes in legislation, policies or enforcement practices.

Many factors point to the conclusion that crime rates have declined in recent years in most of Canada and in many other industrialized countries. First, the recent declines have been seen in most provinces and in the vast majority of Canada's metropolitan areas. Second, declines have been seen in serious crimes such as homicide and robbery, which are less prone to non-reporting. Third, victimization surveys, which measure the public's experiences as victims of crime regardless of whether the incidents were reported to police, have confirmed these recent declines. Fourth, similar trends are being seen in most other industrialized parts of the world, including the United States.

There are no simple reasons why crime is down, but there are many possible explanations. One common explanation is changing demographics. Canada's population is ageing. The population aged 55 and over, an age group characterized by very low involvement in crime, is increasing every year. Furthermore, the proportion of young people aged 15 to 24, those most prone to criminal activity, has been declining for many years. This reduction has coincided with the decline in crime rates seen since the early 1990s. However, while this age group began to decline in 1978, the crime rate was still increasing until 1991.

All this seems to indicate that there are other factors to explain the decreasing crime rate. Some of these factors may be the unemployment rate, changing family structures, education levels and drug use.

Using CMAs to report urban crime

Crime data for major urban areas are presented in this report according to census metropolitan areas (CMAs). CMAs are used to improve the comparability of crime rates among major cities by ensuring that a comparable mix of urban, suburban and rural areas are included for each metropolitan area. Usually more than one police service is responsible for enforcing the law within the boundaries of a CMA.

Since peaking in 1991, the national crime rate has declined 21.7%. However, this rate is still almost double that of 30 years ago. Of the 2.5 million incidents reported in 1998, 12% were violent crimes, 56% were property crimes, and the remaining 32% were other *Criminal Code* offences.

Most provinces and territories followed the national trend, with the largest declines seen in Yukon, Prince Edward Island and Ontario. Only the Northwest Territories, Newfoundland, and Saskatchewan reported an increase.

The highest crime rates were found in the territories and in the Western provinces. Saskatchewan, where crime rates have been rising since 1994, now has the highest rate among the provinces, followed by British Columbia. Newfoundland continues to have the lowest crime rate.

Violent crime declining since 1992

The rate for violent crimes was down 1.5% in 1998, the sixth consecutive annual decline. Police reported slightly less than 300,000 violent crimes, the majority of which (62%) were common assault, the least serious assault category.

The largest declines in violent crime were in Yukon, Nova Scotia, Newfoundland and Manitoba. Saskatchewan and Quebec reported the largest increases. Among the provinces, Manitoba and Saskatchewan reported the highest violent crime rates, while Quebec and Prince Edward Island recorded the lowest rates.

Nunavut: A similar crime profile to other territories

Crime rates in the Northwest Territories and the Yukon are usually higher than those in the provinces. On April 1st, 1999, Nunavut, which comprises the eastern part of the old Northwest Territories, officially became a Canadian territory. It is possible to derive crime statistics for Nunavut and the new Northwest Territories previous to 1999. The table below shows those statistics for the period 1994 to 1998 according to the 1999 boundaries. Yukon is also included for comparison purposes. Although populations in the three territories are lower than 100,000, rates are based on this number for comparability purposes with provinces.

In general, crime rates reported in the region that now forms Nunavut are comparable to those of the two other territories. In 1998, Nunavut reported a violent crime rate higher than both the Yukon and the Northwest Territories, while their property crime rate was lower. The overall crime rate in Nunavut has been declining since 1995, mainly due to a downward trend in property offences.

Crime Rates in Territories, Canada, 1994-1998

	1994	1995	1996	1997	1998	% Change 1997-1998	% Change 1994-1998
Violent Crime - Total							
Nunavut (Eastern Arctic)	6,531	5,636	5,591	5,662	5,879	4%	-10%
Northwest Territories (Western Arctic)	4,826	4,665	4,579	5,354	5,063	-5%	5%
Yukon	2,719	3,228	3,131	3,266	2,904	-11%	7%
Property Crime - Total							
Nunavut (Eastern Arctic)	7,000	7,616	6,973	5,604	4,977	-11%	-29%
Northwest Territories (Western Arctic)	7,373	7,576	7,533	6,727	7,022	4%	-5%
Yukon	8,503	8,939	8,188	8,139	6,982	-14%	-18%
Other Criminal Code Offences							
Nunavut (Eastern Arctic)	9,980	11,240	9,813	9,488	9,660	2%	-3%

Yukon	7,934	7,557	8,410	9,396	8,139	-13%	3%
Criminal Code excluding Traffic - Total							
Nunavut (Eastern Arctic)	23,510	24,492	22,377	20,754	20,517	-1%	-13%
Northwest Territories (Western Arctic)	24,808	23,508	21,919	23,079	25,024	8%	1%
Yukon	19,157	19,724	19,729	20,801	18,025	-13%	-6%

* Rates are based on 100,000 population

All major categories of violent crime remained stable or decreased in 1998. The homicide rate, which includes first- and second-degree murder, manslaughter and infanticide, dropped 6.2%, reaching its lowest level since 1968. The 555 homicides were 31 fewer than in 1997. The homicide rate has generally been declining since the mid-1970s. The rate of attempted murder also dropped in 1998 (-15.5%), continuing to follow the trend for homicide.

The rate of sexual assault declined for the fifth straight year, down 6.6% from 1997. Of the just over 25,000 incidents of sexual assault reported by police in 1998, the vast majority (97%) were classified as level I, the category of least physical injury to the victim. The rate of assault remained stable, as it has since 1995. The robbery rate decreased for the second straight year (-3.1%).

Rates of violent crime declined in 15 of the 25 census metropolitan areas (CMAs) in 1998. The largest declines were in Halifax, Québec and Winnipeg, while the largest increases were in Windsor, Kitchener and Montréal.

Thunder Bay and Regina continued to report the highest rates of violent crime, while the lowest were reported in Sherbrooke and Québec. Homicide rates were highest in Regina and Halifax and lowest in Trois-Rivières and Saint John.

Selected Criminal Incidents Reported by Police, Canada

	1998		Percent change in rate * 1997-1998
	Number	Rate*	
Violent crime - Total	295,369	975	-1.5
Homicide	555	1.8	-6.2
Attempted murder	738	2.4	-15.5
Assault (levels 1, 2, 3)	223,260	737	-0.6
Other assault	12,090	40	1.4
Sexual assault (levels 1,2,3)	25,493	84	-6.6
Other sexual offences	3,459	11	-6.2
Abduction	822	2.7	-17.4
Robbery	28,952	96	-3.1

TOTAL CRIMINAL CODE (Excluding traffic)	2,454,881	8,102	-4.1

* Rates are based on 100,000 population

Fewer incidents involved firearms

Robberies committed with a firearm have decreased steadily since 1991, including a 3.5% drop in 1998. Robberies with a firearm accounted for 18% of all robberies in 1998, down from 25% ten years ago, and 37% 20 years ago.

Data from a sample of 94 police services, including Toronto, Montréal and Vancouver, indicate that the presence of firearms in violent crime has declined steadily over the last five years, from 6.5% of all violent incidents in 1994 to 4.8% in 1998.

Property crime down for seventh consecutive year

The property crime rate fell 6.7% in 1998, continuing the general decline since 1991. Property crimes dropped in all provinces and territories except Newfoundland. All major categories of property crime decreased in 1998.

Break-ins accounted for about one-quarter of the 1.4 million police-reported incidents involving property in 1998. The rate of residential break-ins dropped for the second straight year, down 6.4% from 1997. Business break-ins fell 9.2%.

After growing steadily for more than a decade, the rate of motor vehicle theft declined for the second consecutive year (-7.3%). However, the rate still remains almost 60% higher than a decade earlier. Police reported just over 165,000 stolen vehicles in 1998, an average of about 450 per day. The theft of trucks, minivans and sport-utility vehicles decreased for the first time in 15 years.

Property crime rates dropped in 21 of the 25 CMAs, with the largest decreases in Toronto and London. The largest increases were reported in St. John's and Halifax.

The latest drop in Toronto gives it the lowest property crime rate of all 25 CMAs, followed by Saint John. Regina, which reported the highest rates of both break and enter and motor vehicle theft, continued to show the highest property crime rate, followed by Vancouver.

Impaired driving continues to decline

The rate of persons charged with impaired driving has been declining since the early 1980s. This trend continued in 1998, with a further 3.3% drop. Of the approximately 70,000 persons charged with this offence, 103 were charged with impaired driving causing death, six fewer than in 1997. This number has generally been declining since 1989 when 183 people were charged with impaired driving causing death.

Youth crime continues to decrease

Almost 107,000 youths aged 12 to 17 were charged by police in 1998. The youth crime rate, as measured by the number of youths charged per 100,000 youths, has been dropping since 1991, including a 4.0% decrease in 1998.

Youth crime continues to be more property-oriented than crimes committed by adults. Violent crimes accounted for 20% of youth crime compared with 29% of all crimes committed by adults.

The rate for youths charged with violent crimes fell marginally (-0.6%) for the third year in a row, following drops of 2.4% in 1997 and 0.9% in 1996. Despite these recent declines, the 1998 youth violent crime rate was still 77% higher than a decade ago.

Among violent crimes, the rate of youths charged dropped for robbery (-6.3%) and sexual assault (-4.2%), while it increased for homicide (+3.2%) and assault (+0.9%). There were 56 youths charged with homicide, two more than in 1997 and slightly higher than the average of 51 seen over the past decade.

Over the past decade, the violent crime rate of female youths has increased twice as fast as for male youths. In 1998, the rate of male youths charged with violent crime decreased slightly (-0.9%) while that for female youths remained unchanged. The rate of female youths charged with violent crime is still much lower (474 per 100,000 population) than that for male youths (1,310).

The youth crime rate is generally measured using the number of youths charged by police. With the increasing use of diversion for many first-time, non-violent offenders, it is important to also examine the trend in youths not formally charged by police. While not all police services provide these statistics, those that do so show that the number of youths not formally charged has also been declining in recent years.

Crime Rates by Province/Territory

	Violent crime		Property crime		Total Criminal Code	
	1998 rate*	% change in rate 1997-1998	1998 rate	% change in rate 1997-1998	1998 rate	% change in rate 1997-1998

Sources: Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.
 Statistics Canada, Census and Demographic Statistics, Population Estimates Section.

¹ Excludes traffic offences.

² Rates are calculated based on 100,000 population. Percentage change in rate is based on rate from previous year.

Estimates of population used: Revised intercensal estimates for 1962 to 1990, final updated intercensal estimates for 1991 to 1995, final updated postcensal estimates for 1996, updated postcensal estimates for 1997 and 1998.

+ Due to changes in counting procedures for Metro Toronto as of 1992, caution should be used when calculating year-to-year changes between 1991 and 1992 for Canada, Ontario and Toronto.

^r Revised Data.

 Report entitled Annual Demographic Statistics, 1998, Demography Division, Statistics Canada.

¹ Excludes traffic incidents.

² Rates are calculated on the basis of 100,000 population. The population estimates come from the Annual Demographic Statistics, 1998 report, produced by Statistics Canada, Demography Division. As of July 1, updated postcensal estimates for 1998.

³ The Oshawa Census Metropolitan Area (CMA) is excluded from this table due to methodological concerns with the matching of the police agency jurisdictional boundaries and the CMA boundaries.

⁴ CMA populations were adjusted to follow policing boundaries.

See footnotes at end of tables.

Sources: Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

Statistics Canada, Census and Demographic Division, Population Estimates Section.

- ¹ To produce the "actual number" of incidents, unfounded incidents are subtracted from the number of reported incidents.
- ² Rates are calculated on the basis of 100,000 population. The population estimates come from the Annual Demographic Statistics, 1998 report, produced by Statistics Canada, Demography Division. Population as of July 1, updated postcensal estimates for 1998. Due to rounding, figures may not add exactly to totals.
- ³ "Clearance rate" is the number of incidents cleared by charge and cleared otherwise in the reporting period, divided by the actual number of incidents in the reporting period. Since a criminal incident may be solved several months or years after it was first reported to the UCR Survey, it is possible for the number of incidents cleared to be greater than the total number of actual incidents. In these cases, the clearance rate will be greater than 100%.
- ⁴ The "persons charged" category includes the number of people charged or recommended for charges by police according to the most serious offence. Please refer to section 6.28 of this report for more detail. Please note that all persons charged with traffic offences are grouped under "adults charged" as information on age for this offence is not available.

Source: Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

¹ Includes motor vehicles, boats, vessels or aircraft.

² Rates are calculated on the basis of 100,000 population. The population estimates come from the Annual Demographic Statistics, 1998 report, produced by Statistics Canada, Demography Division. Population as of July 1st: updated postcensal estimates for 1998.

³ The "persons charged" category includes the number of people charged or recommended for charges by police according to the most serious offence. Please refer to section 6.28 of this report for more detail. Please note that all persons charged with traffic offences are grouped under "adults charged" as information on age for this offence is not available.

Source: Report entitled Annual Demographic Statistics, 1998, Statistics Canada, Demography Division. Populations as of July 1st: revised intercensal estimates from 1988 to 1990, final intercensal estimates for 1991 to 1995, final postcensal estimate, for 1996, updated postcensal estimates for 1997 and 1998.

Chapter 4

Incident-based Crime Statistics, 1998 – Sample (46% coverage)

The following tables describe characteristics of the criminal incident, accused persons and victims, based on data collected from 169 police departments in six provinces through the Revised UCR Survey. These data represent 46% of the national volume of crime in Canada. The reader is cautioned that these data are not representative of Canada, nor any particular region in Canada.

Source: Incident-based UCR, Policing Services Program, Canadian Centre for Justice Statistics.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

¹ Homicide characteristics reported to the UCR may not match those on the Homicide base. For detailed analysis of homicides in Canada, refer to the Homicide Survey.

² Other assault includes unlawfully causing bodily harm, criminal negligence causing bodily harm, trap to cause harm, interfering with transportation, etc.

³ Other sexual offences includes sexual interference, sexual touching, sexual exploitation, incest, etc.

⁴ Other violations against the person include treason, abandon child, accessory to murder after the fact, counsel to commit suicide, conceal body of child, and uttering threats.

⁵ Offences against the administration of law and justice include offences such as escape custody, prison breach, fail to comply or appear, fail to attend court, breach of probation, obstruct justice, etc.

⁶ Other Criminal Code offences include counterfeiting, trespass at night, offences vs. public order, gaming and betting, invasion of privacy, offences vs. person and reputation (including uttering threats), offences vs. rights of property, willful and forbidden acts vs. property, fraudulent transactions re. contracts/trade, offences vs. currency, attempts, conspiracies, accessories, and production/distribution of child pornography. Victims may be present where the offence is uttering threats.

⁷ Refers to any person who has been identified by police as being involved in a criminal incident and against whom information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

Source: Incident-based UCR, Policing Services Program, Canadian Centre for Justice Statistics

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

* Gender breakdowns may not add to the total because in some situations the gender of the person was not identified.

¹ Relationship establishes the identity of the accused (spouse, friend) relative to a victim at the time the incident occurred. Spouse and ex-spouse denote marriage or common-law.

² Homicide characteristics reported to UCR may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

³ CBH is an abbreviation for causing bodily harm.

⁴ Other Family includes child, sibling, grandparents, aunts, uncles, cousins, and all others related to the victim either by blood or marriage.

⁵ Friend includes long-term and/or close relationship with the victim (includes intimates, ex-friends, ex-intimates).

⁶ Unknown is coded when the identity of the accused is not known or the relationship cannot be established.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

¹ Relationship establishes the identity of the accused (spouse, friend) relative to a victim at the time the incident occurred. Spouse and ex-spouse denote marriage or common-law.

² Other weapons include weapons such as poison or motor vehicles and where a weapon was used but its type was unknown.

³ Other family includes child, sibling, grandparents, aunts, uncles, cousins, and all others related to the victim either by blood or marriage.

⁴ Friend includes long-term and/or close relationship with the victims (includes intimates), also includes ex-friends and ex-intimates.

⁵ Unknown is coded when the identity of the accused is not known or the relationship cannot be established.

Source: Incident-based UCR, Policing Services Program, Canadian Centre for Justice Statistics

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

* Gender breakdowns may not add to the total because in some situations the gender of the person was not identified.

¹ Homicide characteristics reported to UCR may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide base.

² CBH is an abbreviation for causing bodily harm.

Total Violations Against the Person	Female	Percentage	7.9	46.2	44,781
	Male	Percentage	6.6	39.2	37,933
	Total	Number	12,003	70,711	82,714

Source: Incident-based UCR, Policing Services Program, Canadian Centre for Justice Statistics.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

* Excludes incidents involving multiple accused and incidents where gender is unknown.

Counts the number of individual victimizations by sex of victim and accused.

¹ Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

Table 4.14
Number of Adults and Youths Accused¹ in Criminal Incidents*, 1998

		Total	
		Number	Percentage
Violent	Under 12	887	1.0
	Youths (12-17)	16,173	17.5

Source: Incident-based UCR, Policing Services Program, Canadian Centre for Justice Statistics.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

* Gender breakdowns may not add to the total because in some situations the gender of the person was not identified.

¹ Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

² Homicide characteristics reported to UCR may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

³ CBH is an abbreviation for causing bodily harm.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

¹ Homicide characteristics reported to UCR may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

² CBH is an abbreviation for causing bodily harm.

³ Other types of "cleared otherwise" include suicide and death of the accused/ complainant, reasons beyond the control of the department (eg. policy), accused is less than 12 years of age, committal of accused to a mental facility, accused is in a foreign country, diplomatic immunity or the accused has already been sentenced.

⁴ Not cleared is coded when no accused has been identified in connection with the incident.

Note: Data are a non-representative sample of 169 police departments, representing 46% of the national volume of crime.

¹ Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

² Homicide characteristics reported to UCR may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

³ CBH is an abbreviation for causing bodily harm.

⁴ Cleared otherwise includes suicide or death of the accused, diplomatic immunity, complainant declines to lay charges, department discretion, etc.

Chapter 5

Data Quality

5.1 Authority

The authority to collect UCR statistics is provided under the *Statistics Act*, Revised Statutes of Canada, 1985, Chapter S19.

5.2 Confidentiality

Statistics Canada is prohibited by law from publishing any statistics which would divulge information obtained from the UCR Survey that relates to any identifiable respondent or individual without their previous written consent. The information reported is treated in confidence, used for statistical purposes, and published in aggregate form only. The confidentiality provisions of the *Statistics Act* are not affected by either the *Access to Information Act* or any other legislation.

5.3 Uses of the Data

Data from the UCR Survey provide key information for crime analysis, resource planning and program development for the policing community. Municipal and provincial governments use the data to aid decisions about the distribution of police resources, definitions of provincial standards and for comparisons with other departments and provinces. To the federal government it provides information for policy and legislative development, evaluation of new legislative initiatives, and international comparisons. To the public, the survey offers information on the nature and extent of police-reported crime and crime trends in Canada. As well, media, academics and researchers use these data to examine specific issues about crime.

5.4 Coverage

Aggregate UCR Survey

The aggregate UCR Survey has produced a continuous historical record of crime data since 1962. Coverage in terms of police respondents complying with the aggregate UCR Survey is virtually 100 percent. There are approximately 1,424 separate police locations responding to the Survey, comprising about 376 different police forces. The most significant loss of information occurs in the rare situation where a police force fails to submit data to the CCJS. In this situation, estimates are calculated for that particular force.

Incident-based UCR Survey (UCR2)

Due to its phased implementation, the degree of coverage for the Incident-based UCR Survey is in constant flux. In 1998, the UCR2 Survey had 169 police services reporting to it, representing about 46% of the national volume of reported crime. The reader is cautioned that the incident-based UCR data are not representative of any particular region in Canada: 41% of the incidents are currently from Quebec, 35% from Ontario, 12% from Alberta, 8% from British Columbia, 3% from Saskatchewan and 1% from New Brunswick. This data set, with the exception of Quebec, is composed primarily of urban police departments. The data are not nationally or regionally representative.

Presently, most major municipal respondents report to the UCR2 Survey, thus providing good coverage of urban respondents. The key to achieving national estimates, however, is interface development with the RCMP and OMPPAC (Ontario Municipal Provincial Police Automation Co-operative) and some municipal Ontario forces. Their combined coverage is approximately 40% of the national volume of reported crime and their participation is essential to providing representative coverage of rural crime. The remaining small municipal police respondents are desirable, but not essential for the national sample.

5.5 Data Capture and Editing

Aggregate and incident-based UCR data are handled, processed, and stored in separate operational systems. In order to maintain historical continuity with the aggregate survey as well as comparability across police forces during implementation, detailed data obtained from the incident-based survey are tabulated in order to convert them into counts consistent with those of the aggregate survey. During production of the annual crime data, data from the Aggregate UCR Survey and aggregated data from the Revised UCR Survey are combined to create national statistics.

Aggregate UCR Survey

Data for the aggregate survey are sent to the CCJS on survey forms or in machine-readable format. Monthly counts of aggregate crime and traffic incidents are recorded by police agencies and forwarded to the CCJS approximately two weeks after month-end. These forms are visually edited for completeness and consistency and, if necessary, follow-up telephone calls are made to the respondent for clarification and correction. The crime and traffic data are transferred to an electronic format by the Data Capture Unit of Statistics Canada. All counts are verified to ensure that the information has been correctly transferred from the paper forms to tape. Machine-readable files are transferred to the mainframe environment. Some respondents submit their counts in machine-readable format, such as tape, which eliminates the initial processing procedures.

The raw data are also processed through a set of automated edit routines to further verify the counts for internal consistency. Error reports are produced and respondents are contacted to obtain correct information. Corrections are re-submitted for verification and updates. Master files of aggregate data are continually updated throughout the year and, in turn, are further processed when it is necessary to produce the year-end data.

Police departments are expected to revise submitted information if additional information becomes available (e.g., an accused has been charged for a previously reported incident). Assuming all procedures have been followed by the respondents, the UCR counts processed by the CCJS will correspond with the records maintained by police departments at year-end.

Incident-based UCR Survey (UCR2)

Data for the Incident-based Survey are collected from police automated operational systems by an approved extraction program and are forwarded to the CCJS in a machine-readable format with a standard record layout. Data are generally submitted to the CCJS on a monthly basis.

Upon receipt of the data by the CCJS, initial data quality procedures are applied and the data are prepared for processing by the central processing system. This central processing system performs a series of intensive edits (more than 300) on these data, including duplicate record checks, logic and format error edits and imputations. The system does not allow for errors on key variables; they will not pass the edits until they have been corrected. The outcome of the edits and imputations is documented in a series of edit reports and all processed data are stored in a database. Included in the edit reports are a summary of the number and types of records processed, a frequency count of edit failures and a listing of every record which failed an edit. All edits are examined at the CCJS with the objective of identifying possible problems with the respondent system interface or with respondent adherence to survey data requirements. Any problems are followed up with the respondent. Edit reports are also sent to the respondents for their information and data correction.

5.6 Data Compilation and Verification

The data capture and correction process of both UCR surveys are ongoing activities. At present, the final counts are released to the public in July. This release follows a lengthy data production cycle which begins in December of the previous year with the preparation of interim consolidated statistics. These preliminary statistics are prepared to provide an early warning of any data problems. Problems are identified with the use of a statistical "tolerance" model specifically designed to compare a single respondent to its past behaviour and to that of similar respondents.

Non-respondents are easily identified using this model, and staff then follow-up to collect outstanding monthly counts. Respondents not submitting counts for 6 months or more are referred to as "non-respondents". A closure of a police service or seasonal operation may explain an anomaly in the data. The largest police departments responding to the UCR surveys are asked to review summary data tables for completeness and accuracy and, if necessary, adjustments are made before a master file is created. In order to create either the preliminary or final master file, the incident-based file must be converted to produce counts comparable to those produced by the aggregate survey. The converted counts, or the "Derived Aggregate Offence" data, are combined with the aggregate survey data to produce the national and provincial tables displayed in this publication. In this way, continuity is maintained with the historical crime series.

5.7 Quality of the Data

Data quality is of primary concern with respect to any survey. The CCJS follows several different practices to ensure the quality of UCR data. The internal integrity of records received from respondents and the reasonableness of a respondent's counts are continually assessed through both manual and electronic editing of the data (see section 5.5 for a description of the editing processes). Where possible, UCR data are checked against independently produced respondent crime statistics such as police annual reports. Respondents are also provided toll-free telephone support to assist with any survey-related issues. Training is provided to new respondents and all respondents are provided with comprehensive user manuals which provide rules on survey scoring. The CCJS does not, however, audit respondent data.

As the aggregate and incident-based surveys operate in a significantly different manner, specific issues surrounding data quality and the procedures required to ensure it are different.

Aggregate UCR

Compared to the Incident-based UCR Survey, the aggregate survey is fairly simple to operate, validate, edit and release. The aggregate master files are continually updated throughout the year, and are further processed when necessary to produce consolidated aggregate statistics. Errors identified during the editing of the data are pursued with the respondent where necessary and corrected. As the data reported to the aggregate survey are provided in the form of summary counts, problems related to counting and scoring can only be identified by assessing the reasonableness of a respondent's counts. In this regard, extensive survey support to respondents through user guides, telephone support and training is crucial to maintaining data quality.

Revised (Incident-based) UCR

The Revised UCR Survey captures a broad variety of data on each criminal incident. Data from this survey also undergo extensive editing during the data capture process at the CCJS. Unlike aggregate data where editing can only identify missing data and ensure that cell values tabulate correctly, incident-based data are subjected to very detailed validity and logic checks and imputations which assess a respondent's compliance with survey data requirements and ensure that only records which conform to these requirements are available for analysis. Consequently, in addition to being able to assess the overall counts of incidents, the quality of data associated with each incident can be evaluated in greater detail. Anomalies in crime reporting practices that previously lay undetected are now being corrected. As more police agencies begin to participate in the Revised UCR Survey, UCR data provide an increasingly more accurate picture of the nature of incidents reported to police in Canada.

Specific areas of concern with respect to data quality include: the variety of software interfaces used to extract incident-based UCR data; the complexity of data extraction and data capture; the different operational and administrative practices among different police forces, and; the need to accurately translate these data into aggregate counts.

5.8 Under-Reporting Crime

The UCR Survey collects information on only those crimes which come to the attention of the police. The UCR data, therefore, do not contain a count of all crimes in Canada: some crimes are never detected and, of those that are, some are never brought to the attention of the police. As a result, these are not reported to the survey. Furthermore, the **most serious offence** (see section 6.25) scoring rule explicitly under-counts the number of crimes coming to the attention of police. In actuality, the UCR crime statistics represent a subset of all crimes occurring in Canada, but are an accurate measure of the number of incidents of crime being reported to the police.

The CCJS does not undertake audits of a police department's Records Unit to ensure complete and accurate reporting. Nor does the CCJS examine records which the police have processed and described as outside the scope of the survey. As a consequence, the amount of crime which actually falls within the scope of the survey, but is not reported, is unknown. Police departments, however, have established rules governing the collection of data (coding manuals) and have designated individuals with the task of verifying the reports from which the data are extracted. Local quality control measures are in effect for respondents of the aggregate and the incident-based survey to minimize the under-reporting of crime.

The UCR Survey also under-reports crime to the extent that each year, a small number of respondents do not submit the required information. In these instances, however, the CCJS will estimate the missing data. Excluded from the list of non-respondents are police departments which were open on a seasonal basis and those that did not have any crime to report.

5.9 Inter-Municipal Comparisons

Data users should consider a number of factors when comparing crime data from various municipal police forces. Differences across municipalities in their crime data can be attributed to factors such as demographic and economic differences, and police force and community characteristics. Inter-municipal differences in police policies or resources and historical changes in enforcement practices of police may drive variations in reported statistics. Statistics for certain crimes (e.g., prostitution, gambling, drug crime and traffic offences) are particularly sensitive to changes in policing practices.

Data users are also advised that populations used to calculate crime rates for municipal police agencies reflect only the resident population of the police agency's area of jurisdiction, not the number of people spending part of their day in the area. This means that police agencies responsible for only urban core areas will show high crime rates because of the areas' relatively small resident populations and high volumes of crime. In order to enhance comparability among major metropolitan areas data are now compiled at the census metropolitan area (CMA) level.

5.10 Comparability over Time

Legislative Influences

Changes in legislation and the resulting change in the offence classification creates discontinuity in the historical record of particular criminal offences. Legislative changes to assault, sexual assault, theft, arson, mischief, prostitution and youth crime must be considered when making comparisons over time. Some of the more recent changes are as follows:

Sexual Assault: Bill C-127 (1983):

Bill C-127 abolished the offences of rape, attempted rape and indecent assault and introduced a three-tiered structure for sexual assault offences. The Bill also eased the circumstances under which police could lay charges in incidents of sexual and non-sexual assault.

Young Offenders Act (1984):

With the proclamation of the YOA in April 1984, 12 years became the minimum age for which criminal charges could be laid. However, the maximum age continued to vary until April 1985, when the maximum age of 17 (up to the 18th birthday) was established in all provinces and territories.

Youths, as defined in this publication, refer to those aged 12 to 17 (inclusive). This definition applies to the target group who fall under the delegation of the *Young Offenders Act (YOA)*.

Dangerous and Impaired Operation: Bill C-18 (1985):

Bill C-18 imposed more stringent sentences for dangerous driving and drinking and driving. It also facilitated the enforcement of impaired driving laws by authorizing police to take blood and/or breath samples under certain circumstances.

Property value limits: Bill C-18 (1985) and Bill C-42 (1995):

In 1985, Bill C-18 altered the property value limits from under and over \$200 to under and over \$1,000. This applies to offences such as theft, possession of stolen goods, mischief and fraud.

As of February 1995, Bill C-42 revised the property value limits to under and over \$5,000.

Alternative measures: Bill C-41 (1996):

Bill C-41 was proclaimed into law September 3, 1996. One of its highlights was the introduction of "alternative measures" for adults, which provided ways of dealing with disputes and minor offences outside the formal court proceedings.

Firearms: Bill C-68 (1997):

Bill C-68, proclaimed on January 1, 1997, requires that all firearm owners must obtain a Firearms Licence by January, 2001. This licence replaces the Firearms Acquisition Certificate in use since 1977. Commencing October 1, 1998, each weapon must be registered within five years and a Registration Certificate will be issued. Bill C-68 also provides for tougher penalties for using a firearm while committing a crime.

Comparing UCR Data with Courts and Corrections Data

It is difficult to make comparisons between data reported by police and data from other sectors of the criminal justice system (i.e., courts and corrections). There is no single unit of count (i.e., incidents, offences, charges, cases or persons) which is defined consistently across the major sectors of the justice system. As well, charges actually laid can be different from the **most serious offence** by which incidents are categorized. In addition, the number and type of charges laid by police may change at the pre-court stage or during the court process. Time lags between the various stages of the justice process also make comparisons difficult.

Chapter 6

Concepts and Definitions

6.1 Incident

The “**incident**” is the basis for counting reported crime in both UCR Surveys. An incident is the set of connected events usually constituting an occurrence report. In the aggregate survey, the incident is used in conjunction with the most serious offence rule (MSO) (see section 6.25 on the MSO rule) to form the aggregate offence counts. In the incident-based survey, information for each incident is reported individually. Aggregate most serious offence rules are then applied to these data in order to reconcile them with historical aggregate counts as well as with data from aggregate respondents (see section 5.6 on data compilation and verification). The **incident “date”** is based on the date the incident became known to the police, as opposed to the date on which the incident occurred.

6.2 Aggregate UCR Survey

In UCR terminology, **Aggregate UCR** has two meanings. It can represent both the aggregate survey instrument itself as well as the aggregate *form* of UCR data (thus including incident-based UCR data which have been translated into aggregate counts). The aggregate UCR concepts and definitions described below apply equally to both. In this report, aggregate UCR statistics are presented in tables 3.1 to 3.4.

6.21 Violent incidents involve offences that deal with the application, or threat of application, of force to a person. These include homicide, attempted murder, various forms of sexual and non-sexual assault, robbery and abduction. Traffic incidents that result in death or bodily harm are included under *Criminal Code* traffic incidents.

6.22 Property incidents involve unlawful acts with the intent of gaining property but do not involve the use or threat of violence against an individual. Theft, breaking and entering, fraud and possession of stolen goods are examples of property crimes.

6.23 Other *Criminal Code* incidents involve the remaining *Criminal Code* offences that are not classified as violent or property incidents (excluding traffic). Examples are mischief, bail violations, disturbing the peace, arson, prostitution and offensive weapons.

6.24 Total *Criminal Code* incidents is the tabulation of all violent, property and other *Criminal Code* incidents reported for a given year.

6.25 Most Serious Offence The UCR Survey classifies incidents according to the **most serious offence (MSO)** in the incident. In categorizing incidents, violent offences always take precedence over non-violent offences. Within violent and non-violent, offences are then sorted according to the maximum sentence under the *Criminal Code*. The UCR Survey scores violent incidents differently from other types of crime. For violent crimes, a separate incident is recorded for each victim (categorized according to the *most serious offence* against the victim). If, for example, one person assaults three people, then three incidents are recorded. If three people assault one person, only one incident is recorded. For non-violent crimes, one incident (categorized according to the *most serious offence* in the incident) is counted for every distinct or separate occurrence.

Robbery is one exception to the above scoring rule. Robbery is categorized as a violent offence. Unlike all other violent offences, one occurrence of robbery is equal to one incident, regardless of the number of victims. The reason for this exception is that robbery can involve many people who could all be considered victims. In a bank robbery with 5 tellers and 20 customers present, 25 incidents of robbery would be counted if the normal scoring rule for violent incidents were applied. This would seriously overstate the occurrence of robbery.

Thus, the total number of incidents recorded by the UCR Survey is not a census of all violations of the law that come to the attention of police. Rather, it is equal to the number of victims of violent crimes (other than robberies) plus the number of separate occurrences of non-violent crimes (and robberies).

6.26 Actual Incidents When a crime is reported to the police, the incident is recorded as a “reported” incident. Police then conduct a preliminary investigation to determine the validity of the report. Occasionally, crimes reported to the police prove to be unfounded. Unfounded incidents are subtracted from the number of reported incidents to produce the number of “actual incidents.” Numbers and rates of crime are calculated on the basis of “actual incidents” categorized according to the **most serious offence**.

6.27 Clearance of Actual Incidents Criminal incidents can either be cleared “by charge” or “cleared otherwise”. When a police investigation leads to the identification of a suspect, an “information” is laid against that person (i.e., the person is formally charged). From a statistical point of view, the laying of an information means that at least one actual incident can be “cleared by charge”.

Incidents can also be “cleared otherwise.” In some cases, police cannot lay an information even if they have identified a suspect and have enough evidence to support the laying of an information. Examples include cases of diplomatic immunity, instances where the complainant declines to proceed with charges against the accused, or cases where the alleged offender dies before he or she can be formally charged. Such incidents are considered to be “cleared otherwise,” that is, other than by the laying of a charge.

Since the process of solving crime is often time-consuming, a criminal incident may be solved months or even years after it was reported to police and recorded on the UCR Survey. Therefore, on the aggregate UCR database, there is no direct relationship between the number of “actual incidents” and the number of “incidents cleared.” This is why it is possible for the number of incidents cleared to be greater than the total number of actual incidents. Although total incidents are not necessarily linked with those incidents that are cleared, a clearance rate may provide a good indication of the proportion of incidents that are cleared by charge or otherwise for different types of offences.

Some types of procedural differences influence the comparability of municipal or provincial data. Specifically, the survey element “clearance status” is interpreted differently in several provinces compared to other jurisdictions. In New Brunswick and Quebec (for the Sûreté du Québec only), the initial clearance status recommended by the police (e.g., cleared by a specific charge) is subject to approval by the Crown. Should the Crown find insufficient evidence to proceed with the charge, the police revise their records to take into account the recommendation of the Crown. According to the data element definition, an incident is cleared by charge only if there is sufficient evidence to proceed with the charge. However, other jurisdictions, including British Columbia which has a system similar to Quebec, do not revise their internal records when the Crown disagrees with the police assessment of the evidence. For this reason, caution should be taken in making comparisons between jurisdictions for this data element.

6.28 Persons Charged The UCR Survey also records the number of persons charged. For incidents that are cleared, the survey collects the number of adults charged by gender, as well as the number of youths (aged 12 to 17 years) charged by gender. The “persons charged” category includes the number of people charged or recommended for charges by police, *not* the number of charges laid or recommended against those people. A person who is simultaneously charged with more than one offence is counted according to the *most serious offence*, even if the offences occurred in more than one incident. In addition, persons may be counted more than once throughout the year; that is, individuals are counted on each occasion that they are charged by police.

“Persons charged” refers to persons who were charged in connection with a particular incident. These persons, however, may have been charged later with a lesser offence. For example, a person who commits a breaking and entering offence may end up being charged with possession of stolen goods if, for instance, the police have better evidence on the latter offence. Both the “actual incident” and the “person charged” are counted under breaking and entering, even though the person was actually charged with possession of stolen goods.

6.3 Incident-based UCR Survey (UCR2)

6.31 Violations The UCR2 Survey employs a new, more detailed set of offence categories compared to the aggregate UCR. Any attempt to match the aggregate UCR sub-totals of Violent, Property and Other Criminal Code Offences with the incident-based sub-totals is not advised as the two subsets are comprised of different offence categories. For example, the incident-based sub-total of Violations Against the Person includes additional offences (e.g. criminal negligence causing death/causing bodily harm, other related offences causing death, conspire to commit murder, kidnapping, hostage taking, extortion, criminal harassment and other violent violations).

There are six types of violations included in the category of **Violations against Property**: break and enter, theft, arson, possession of stolen goods, fraud and mischief. Once again, two additional offences of arson and mischief are included in this sub-grouping yet are not amongst the components making up “Total Property” offences under the aggregate UCR. Similarly, **Other Criminal Code Violations** within the Incident-based UCR Survey includes the additional offence categories of firearm transfers/serial numbers and threatening/harassing phone calls which are not reported separately within the aggregate survey.

Although incident-based survey respondents can code up to four violations on an incident, for reporting purposes, tables 4.2 - 4.20 in this report are based on the most serious offence rule (see section 6.25 for a description of this rule) and include only actual incidents (see section 6.26).

Persons Data

A key aspect of the incident-based UCR survey is the capture of victim and accused information which is directly linked to the incident.

- 6.32 Charged/Suspect-Chargeable (Accused)** Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Accused persons include those charged as well as those not charged for a variety of reasons, including diplomatic immunity, use of alternative measures or diversion, and death. Individuals involved only for investigative purposes and subsequently released without being charged or formally processed in some other official manner will not be identified as an accused. Unless otherwise noted, the accused counts and offence characteristics described in the tables in Chapter 4 are based on each accused identified with **each** incident, not the most serious offence a person is charged with at a given time as in the aggregate method (see section 6.28).
- 6.33 Victim** Refers to anyone who is the victim of a violation against the person (as defined by the Revised UCR survey). These include all violent violations and any traffic violations that cause bodily harm or death to anyone other than the accused. Persons who are the victim of other types of incidents of crime are not captured. Victimization counts reported in Chapter 4 include each victim. There may be more than one victim in an incident. The categorization of violation type is, as with Aggregate UCR, based on the most serious violation against that victim (see most serious offence rule, section 6.25).
