## Preface

The mandate of the National Justice Statistics Initiative is to provide information to the justice community and the public on the nature and extent of crime and the administration of civil and criminal justice in Canada. The operational arm of the Initiative is the Canadian Centre for Justice Statistics.

This *Canadian Crime Statistics* publication was prepared by Monique Poulin and Ron Logan, Policing Services Program, Canadian Centre for Justice Statistics.

## Acknowledgements

The Canadian Centre for Justice Statistics gratefully acknowledges the assistance of Canadian police agencies, the Canadian Association of Chiefs of Police and the Police Information and Statistics (POLIS) Committee in making this report possible. Special thanks are offered to the CCJS staff who provided comments, technical and clerical support in the preparation of this publication.

# Chapter 1

## Crime Statistics in Canada

### 1.1 Introduction

This publication provides a statistical summary of police-reported crime in Canada and the provinces/territories back to 1962. The bulk of the data presented in this publication are taken from the two Uniform Crime Reporting (UCR) databases with additional statistics from the Homicide Survey.

Included in this publication are the following categories of tables: standard crime tables at the national and provincial/territorial levels; an historical crime table dating back to 1962; a municipal table describing crime in census metropolitan areas (CMAs) with populations over 100,000; and, a set of tables using the Incident-based UCR (UCR2) Survey to describe characteristics of criminal incidents, their victims, and the accused persons. These tables include data on weapon use, the accused-victim relationship, and the age and sex of victims and accused.

### 1.2 Uniform Crime Reporting (UCR) Survey

The Canadian Centre for Justice Statistics (CCJS), in co-operation with the policing community, collects police-reported crime statistics through the UCR Survey. The UCR Survey was designed to measure the incidence of crime in Canadian society and its characteristics.

The UCR Survey produces a continuous historical record of crime and traffic statistics reported by every police agency in Canada since 1962. UCR data reflect reported crime that has been substantiated by police. Information collected by the survey includes the number of criminal incidents, the clearance status of those incidents and persons-charged information. The UCR Survey is considered to be a summary or aggregate-type census, with data available for nearly 100 separate criminal offences.

The UCR Survey classifies incidents according to the most serious offence (MSO) occurring in the incident (generally the offence which carries the longest maximum sentence under the *Criminal Code of Canada*). In categorizing incidents, violent offences always take precedence over non-violent offences. For example, an incident involving both a breaking and entering offence and an assault is counted as an incident of assault. As a result of the MSO scoring rule, less serious offences are under-counted by the UCR Survey.

### 1.3 Incident-based UCR (UCR2) Survey

Extensive re-development work was initiated in 1984 in order to expand the information collected from the UCR Survey. The UCR2 Survey allows detailed examinations of accused and victim characteristics (e.g., age, sex, accused-victim relationship, level of injury and weapon causing injury), as well as characteristics of the incident itself (e.g., location, targets of violations, secondary violations, the presence of weapons, property type damaged or stolen, date and time). The survey generates a rich micro-database where incident, accused and victim variables can be linked and analyzed. This alternative method of data collection in which a separate statistical record is created for each criminal incident is known as an "incident-based" reporting system. Research questions and issues that previously could only be addressed through small sample surveys or case studies can now be undertaken using data from the UCR2 Survey.

Coverage will continue to grow as more police agencies convert to the Incident-based UCR Survey. The first police respondents to report to the UCR2 Survey were the Niagara Regional Police and Fredericton Police who began collecting incident-based data in 1988. By the end of 2000, 166 police agencies, representing 53% of the national volume of reported crime, were responding to the new Survey (see Table 4.1 for a list of Incident-based UCR2 Survey respondents).

### 1.4 Homicide Survey

In addition to the two UCR surveys, the CCJS collects detailed information on all homicide offences in Canada through the Homicide Survey. The Homicide Survey has been the primary mechanism for the collection of national homicide statistics since 1961. It provides detailed information about each homicide occurring in Canada, as well as the characteristics of the victims and the accused.

Homicide statistics are collected by the Homicide Survey as well as by both the aggregate and incident-based UCR surveys. Specific research queries regarding homicide occurrences and their circumstances are best addressed through the Homicide Survey which offers a greater range of variables than either of the UCR surveys.

### 1.5 Police Administration Survey

Another survey undertaken by the CCJS is the Police Administration Survey. In operation since 1962 and revised in 1986, this Survey collects information on police personnel and expenditures from all municipal and provincial police forces, as well as the RCMP. Personnel data are available by type of personnel (police, special constables, civilians) and by gender. Police expenditure information is available by major financial category (e.g., salaries, wages and benefits, other operating costs and total operating expenditures). *Police Resources in Canada* (Catalogue 85-225-XIE) is the annual report produced from this survey.

### 1.6 Victimization Surveys

Criminal victimization surveys are undertaken by Statistics Canada on a cyclical basis to produce data which supplement official police statistics (UCR data). One way to estimate the extent of unreported crime is through victimization surveys. Statistics Canada first conducted a victimization survey as part of the General Social Survey (GSS) Program in 1988. The survey was repeated in 1993 and again in 1999. Because the GSS asks a sample of the population about their personal crime experiences, it captures information on crimes that have been reported to the police, as well as those that have gone unreported. The number of unreported crimes can be substantial. For example, the 1999 GSS estimated that 78% of sexual assaults and 67% of household thefts were not reported to the police. As a result, victimization surveys usually produce much higher rates of victimization than police-reported statistics.

Victimization surveys have limitations, however. For one, they rely on respondents to report events accurately. As well, they address only certain types of crimes. They do not capture information on crimes that have no obvious victim (e.g. prostitution and impaired driving), where the victim is a business or school, where the victim is dead (as in homicides), or where the victim is a child (anyone younger than 15 in the case of the GSS).

For further information, see "Criminal Victimization in Canada, 1999", by Sandra Besserer and Catherine Trainor in *Juristat*, Catalogue 85-002, Vol. 20 No.10.

## Chapter 2

### Overview of Crime in Canada, 2000

The national crime rate, based on data reported by police, fell for a ninth consecutive year in 2000. The 1% decline in the rate of total *Criminal Code* offences was primarily the result of a 5% drop in property crime. However, increases were reported in total violent crime (+3%) as well as a number of other offences including drug offences (+9%).

#### Crime rate, Canada, 1962-2000

Rate per 100,000 total population

The overall crime rate fell in three of the four largest provinces: British Columbia, Alberta, and Ontario. Not all regions followed the national trend; the crime rate increased in Saskatchewan, Newfoundland, Quebec, Manitoba and in all three territories.

Saskatchewan's crime rate of 12,730 criminal incidents for every 100,000 population was the highest among the provinces for a third consecutive year, followed by British Columbia (11,253) and Manitoba (10,723). Newfoundland continued to have the lowest crime rate (5,711), followed by Quebec (6,027). As in previous years, all three territories reported crime rates that were much higher than the provinces.

Numerous factors contribute to changes in the crime rate. While this report does not attribute reasons for the recent decreases in crime, some of the possible explanations include the aging of the population, a healthy economy, and new approaches to both preventing and solving crimes.

The youth crime rate, as measured by the number of youths formally charged by police, rose slightly in 2000 (+1%) after having fallen in the previous eight years. Similar to the overall crime trend, the youth charged rate for violent offences increased 7%, while that for property offences declined 4%.

Most major categories of youth violent crime rose in 2000, including sexual assault (+18%), assault (+7%) and robbery (+2%). Despite the large increase in youths charged with sexual assault in 2000, the rate for this offence was still 24% lower than its peak in 1993. In 2000, 41 youths were charged with homicide, four fewer than in 1999. Though this figure fluctuates from year to year, this was well below the annual average of 51 homicides over the past 10 years. Youths charged with break-ins declined 6% - the ninth straight annual drop - but the rate of youths charged with motor vehicle theft increased 3%.

#### Note to readers

Data on incidents that come to the attention of the police are captured and forwarded to the CCJS via the Uniform Crime Reporting (UCR) survey according to a nationally-approved set of common scoring rules, categories and definitions. UCR data are available back to 1962 at the national, provincial/territorial level, and from 1991 onward at the Census Metropolitan Area level.

### Crime rates by province and territory, 2000

### Slight increase in violent crime after seven years of decline

The slight increase in the national violent crime rate in 2000 followed seven consecutive years of decline. Prior to these declines, which started in 1993, the violent crime rate had increased each year since 1977. The violent crime rate in 2000 was about the same as it was a decade before and 54% higher than 20 years before.

Five provinces reported rises of 4% or more in their violent crime rate: Quebec (+8%), Prince Edward Island (+5%), Saskatchewan (+4%), Manitoba (+4%) and Ontario (+4%). Three provinces reported decreases of around 1% to 2%; British Columbia posted the largest drop.

Even with an 8% increase in 2000, Quebec (together with Prince Edward Island) still had the lowest violent crime rate (718 and 719 incidents, respectively, per 100,000 population). Saskatchewan (1,663) and Manitoba (1,638) reported the highest rates. All three territories reported violent crime rates at least double those of any province.

### Homicide rate stable

The homicide rate, generally declining since the mid-1970s, remained unchanged at 1.8 homicides per 100,000 population. There were 542 homicides in 2000, 4 more than in 1999. However, the rate of attempted murders jumped 11%, or by 79 incidents.

Manitoba (2.6 per 100,000) and Saskatchewan (2.5) reported the highest provincial homicide rates. Both Nunavut (10.8) and the Yukon (6.5) had higher rates than any of the provinces. Newfoundland had the lowest homicide rate (1.1), followed by New Brunswick (1.3) and Ontario (1.3).

The rate of assaults increased 5%, including a 4% rise in common assault, the least serious of the three levels of assault. This one crime accounted for almost two-thirds of all violent crimes. Assaults with a weapon were up 7%, while aggravated assaults, the most serious of the three assault categories, rose 1%.

The reported sexual assault rate remained stable in 2000, following six years of decline. Of the 24,049 reported incidents of sexual assault, 98% were classified by police as level 1 (the least serious level of sexual assault). The two most serious categories, sexual assault with a weapon (-17%) and aggravated sexual assault (-15%), continued to decline.

The rate of robbery dropped 7%, continuing a downward trend evident since 1991. Robberies with a firearm dropped 16%.

Data on criminal harassment are only available from those police services providing data to the UCR2 survey. In order to permit trend analysis, a separate UCR2 Trend Database has been created for a subset of all respondents who have been reporting data to this survey since 1995.<sup>1</sup>

Reported incidents of criminal harassment, commonly known as stalking, continued to increase in 2000. The group of police services, representing 41% of the national volume of crime reported, posted an estimated 16% rise in criminal harassment incidents from 1999 to 2000, and about a 50% increase since 1996. It is difficult to determine if this represents a real increase in stalking behaviour or reflects greater awareness and reporting of this relatively new offence.

### Property crime rate continues to drop

The property crime rate has generally been decreasing since 1991. In 2000, there were approximately 1.3 million property crime incidents reported by police, resulting in the lowest property crime rate since 1973. All property crime categories contributed to the national 5% decline, particularly the 9% drop in the rate of break-ins. Residential break-ins fell 12%, and business break-ins fell 3%.

<sup>1</sup> The UCR2 Trend Database represents a sub-set of all respondents who have been providing UCR2 data for the past six years to enable the analysis of trends in the characteristics of accused, victims and criminal incidents. The 2000 Trend Database contains 106 police services, representing 41% of the national volume of crime. The entire 2000 UCR2 Database contains 166 police services, representing 53% of the national volume of crime.

Property crime rates dropped in all provinces except Saskatchewan (+2%) in 2000. The largest declines occurred in Nova Scotia (-11%), Alberta (-7%), British Columbia (-6%) and Ontario (-5%). Despite decreases in property crimes over the last four years, British Columbia continues to have the highest property crime rate (6,359 incidents per 100,000) among the provinces, followed by Saskatchewan (5,870). The lowest rates were reported in Newfoundland (2,411) and New Brunswick (2,876).

The motor vehicle theft rate dropped 2%, a fourth annual decline, following steady growth over the previous decade. Despite these recent declines, the rate was 27% higher than 10 years previous. However, not all provinces saw declines in motor vehicle thefts in 2000. Increases of more than 8% were seen in Newfoundland, Prince Edward Island, Manitoba and Saskatchewan. Manitoba once again posted the highest rate among the provinces (1,028 motor vehicle thefts per 100,000 population), and Newfoundland the lowest (119).

### Increase in most drug categories

A 9% increase in cannabis offences contributed to the overall 9% increase in the rate of total drug offences, continuing the upward trend that began in 1994. Cannabis offences accounted for three-quarters of all drug-related incidents. More than two-thirds of these were for possession. Increases were also seen in the rate of cocaine offences (+6%) and other drug offences (+12%). Heroin offences dropped 8%.

Police charged 69,192 persons with impaired driving in 2000, a 5% drop from 1999. The impaired driving rate had stabilized during 1998 and 1999 after 15 years of steady decline. It should be noted that some of this decline could be attributed to a growing tendency by police to issue a road-side suspension, rather than charge some drivers tested to be slightly over the legal alcohol limit.

### Metropolitan area crime rates highest in west, lowest in Quebec

Among the 25 census metropolitan areas, the highest overall crime rates in 2000 were reported in Regina, Saskatoon, Vancouver, Victoria and Winnipeg. The lowest were in Chicoutimi-Jonquière, Québec, Trois-Rivières and Toronto.

The largest increases in overall crime in 2000 occurred in Saskatoon (+11%) and St. John's (+10%). The largest declines were reported in Saint John (-12%), Ottawa (-11%) and Victoria (-11%).

Despite a 7% decline, Regina reported the highest violent crime rate for the second consecutive year, followed by Saskatoon and Thunder Bay. Double-digit increases in violent crime were reported in Hull, Halifax, Saskatoon, Winnipeg, Québec and Sherbrooke. Victoria reported the largest decline in violent crime (-12%).

Regina (3.5 homicides per 100,000 population) and Saskatoon (3.0) also reported the highest homicide rates, followed by Trois-Rivières (2.8) and Chicoutimi-Jonquière (2.8). The lowest homicide rates were found in Hull (0.4), London (0.5), Sudbury (0.6) and Saint John (0.7).

### Selected criminal incidents reported by police, Canada, 2000

	2000		Percent change in rate 1999-2000

## Crime rates for census metropolitan areas

CMA <sup>2</sup>	Violent crime		Property crime		Total <i>Criminal Code</i> <sup>1</sup>	
	2000 rate <sup>3</sup>	% change in rate 1999-2000	2000 rate <sup>3</sup>	% change in rate 1999-2000	2000 rate <sup>3</sup>	% change in rate 1999-2000
Regina	1,590	-6.6	8,414	-1.0	14,769	-2.4
Saskatoon	1,485	11.3	6,843	6.0	12,891	10.5
Vancouver <sup>4</sup>	1,107	-0.7	7,263	-6.2	11,210	-2.8
Victoria	1,118	-11.6	5,540	-15.6	10,594	-10.5
Winnipeg	1,356	10.5	5,707	2.5	10,377	6.7
Halifax	1,164	12.0	5,402	-6.7	9,249	-3.7
Thunder Bay	1,384	-8.9	4,275	2.7	8,900	-2.0
London <sup>5</sup>	838	-5.3	5,307	0.9	8,721	1.6
Edmonton	941	8.2	4,680	-2.6	8,377	-1.9
Montréal	921	9.0	4,399	-3.0	7,234	1.1
Calgary	879	2.7	4,510	-11.2	7,115	-6.6
Windsor	755	1.8	3,831	9.0	7,086	7.5
Sudbury	974	2.8	3,727	1.2	6,784	3.5
St. John's	851	-1.6	3,831	12.6	6,759	9.6
Hamilton	1,007	2.5	3,565	-7.8	6,565	-2.7
St. Catharines-Niagara <sup>5</sup>	623	0.7	3,705	-8.4	6,546	-4.5
Hull <sup>6</sup>	771	17.7	3,686	-2.9	6,415	3.9
Saint John <sup>5</sup>	1,046	1.2	2,836	-9.1	6,277	-12.4
Kitchener <sup>5</sup>	689	3.1	3,744	-7.3	6,110	-4.3
Sherbrooke	438	10.0	3,927	0.8	5,829	--
Ottawa <sup>7</sup>	690	-5.3	3,328	-15.7	5,680	-11.5
Toronto	868	7.5	2,939	-6.8	5,290	-2.1
Trois-Rivières	456	-3.8	3,280	-5.6	5,207	-6.4
Québec	514	10.5	3,127	0.9	5,108	4.8
Chicoutimi-Jonquière <sup>5</sup>	563	-1.1	3,138	-5.4	5,104	-3.0

<sup>1</sup> Total *Criminal Code* offences also include other *Criminal Code* offences not shown in this table, but excludes traffic offences.

<sup>2</sup> A Census Metropolitan Area typically comprises more than one police service. Also, please note that the Oshawa Census Metropolitan Area (CMA) is excluded from this table due to the incongruity between the police agency jurisdictional boundaries and the CMA boundaries.

<sup>3</sup> Rates are calculated on the basis of 100,000 population.

<sup>4</sup> As a result of labour action, from September to December 2000, there was a decrease in the number of theft crimes reported to Vancouver Police. This affects both the total property crime and the total *Criminal Code* figures when comparing to previous years.

<sup>5</sup> Populations were adjusted to follow policing boundaries.

<sup>6</sup> Hull refers to the Quebec portion of the Ottawa-Hull Census Metropolitan Area.

<sup>7</sup> Ottawa refers to the Ontario portion of the Ottawa-Hull Census Metropolitan Area.

## Chapter 3

### Aggregate Crime Statistics – Census

The following tables are based on aggregate UCR Survey data. Coverage in terms of police departments complying with the survey is virtually 100%.

**Table 3.1**  
**Police Reported Crime, Canada, 1962-2000**

Year	Population ('000)	Violent Crime			Property Crime			Other Criminal Code			Total Criminal Code <sup>1</sup>

**Source:** Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

<sup>1</sup> Excluding traffic offences.

<sup>2</sup> Rates are calculated on the basis of 100,000 population. The population estimates are from the Annual Demographic Statistics, 2000 report, produced by Demography Division, Statistics Canada (Catalogue 91-213-XPB). Populations as of June 1st: intercensal estimates from 1962 to 1970, without adjustment for net census under-coverage. Populations as of July 1st: revised intercensal estimates from 1971 to 1990; final intercensal estimates from 1991 to 1995; final postcensal estimates for 1996 and 1997; updated postcensal estimates for 1998 and 1999; and preliminary postcensal estimates for 2000.

<sup>3</sup> In comparison to the previous year rate. Percent change based on unrounded rates.

**Source:** Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

<sup>1</sup> Please note that a CMA typically comprises more than one police service. Also, please note that the Oshawa Census Metropolitan Area (CMA) is excluded from this table due to the incongruity between the police agency jurisdictional boundaries and the CMA boundaries.

<sup>2</sup> Excluding traffic offences.

<sup>3</sup> Rates are calculated per 100,000 population. The population estimates come from the Annual Demographic Statistics, 2000 report, produced by Statistics Canada, Demography Division (Catalogue 91-213-XPB). Populations as of July 1st: updated postcensal estimates for 1999 and preliminary postcensal estimates for 2000.

<sup>4</sup> As a result of labour action, from September to December 2000, there was a decrease in the number of theft crimes reported to Vancouver Police. This affects both the total property crime and the total Criminal Code figures when comparing to previous years.

<sup>5</sup> Ottawa refers to the Ontario part of the Ottawa-Hull CMA.

<sup>6</sup> Populations were adjusted to follow policing boundaries.

<sup>7</sup> Hull refers to the Quebec part of the Ottawa-Hull CMA.

See footnotes at end of tables.

**Sources:** *Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.  
Census and Demographic Division, Population Estimates Section, Statistics Canada.*

**Footnotes:**

- <sup>1</sup> To produce the "actual number" of incidents, unfounded incidents are subtracted from the number of reported incidents.
- <sup>2</sup> Rates are calculated on the basis of 100,000 population. The population estimates for 2000 are preliminary postcensal estimates as of July 1 and are provided by Statistics Canada's Demography Division, Population Estimates Section. Due to rounding, figures may not add exactly to totals.
- <sup>3</sup> "Clearance rate" is the number of incidents cleared by charge and cleared otherwise in the reporting period, divided by the actual number of incidents in the reporting period. Since a criminal incident may be solved several months or years after it was first reported to the UCR Survey, it is possible for the number of incidents cleared to be greater than the total number of actual incidents. In these cases, the clearance rate will be greater than 100%.
- <sup>4</sup> The "persons charged" category includes the number of people charged or recommended for charges by police according to the most serious offence. Please refer to section 6.28 of this report for more detail. Please note that all persons charged with traffic offences are grouped under "adults charged" as information on age for this offence is not available.

**Source:** Uniform Crime Reporting Survey, Canadian Centre for Justice Statistics.

<sup>1</sup> Includes motor vehicles, boats, vessels or aircraft.

<sup>2</sup> Rates are calculated on the basis of 100,000 population. The population estimates for 2000 are preliminary postcensal estimates as of July 1 and are provided by Statistics Canada's Demography Division, Population Estimates Section. Due to rounding, figures may not add exactly to totals.

<sup>3</sup> "Clearance rate" is the number of incidents cleared by charge and cleared otherwise in the reporting period, divided by the actual number of incidents in the reporting period. Since a criminal incident may be solved several months or years after it was first reported to the UCR Survey, it is possible for the number of incidents cleared to be greater than the total number of actual incidents. In these cases, the clearance rate will be greater than 100%.

<sup>4</sup> The "persons charged" category includes the number of people charged or recommended for charges by police according to the most serious offence. Please refer to section 6.28 of this report for more detail.

## Chapter 4

### **Incident-based (UCR2) Crime Statistics, 2000 – Non-Representative Sample (53% coverage)**

The following tables describe characteristics of the criminal incident, accused persons and victims, based on data collected from 166 police departments in nine provinces through the Incident-based UCR Survey. These data represent 53% of the national volume of crime in Canada. The reader is cautioned that these data are not representative of Canada, nor any particular region in Canada.

**Source:** Incident-based UCR2, Policing Services Program, Canadian Centre for Justice Statistics.

**Note:** Data are from a non-representative sample of 166 police departments, representing 53% of the national volume of crime.

<sup>1</sup> Homicide characteristics reported to the UCR may not match those on the Homicide base. For detailed analysis of homicides in Canada, refer to the Homicide Survey.

<sup>2</sup> Other assault includes unlawfully causing bodily harm, criminal negligence causing bodily harm, trap to cause harm, interfering with transportation, etc.

<sup>3</sup> Other sexual offences includes sexual interference, sexual touching, sexual exploitation, incest, etc.

<sup>4</sup> Other violations against the person include treason, abandon child, accessory to murder after the fact, counsel to commit suicide, conceal body of child, and uttering threats.

<sup>5</sup> Offences against the administration of law and justice include offences such as escape custody, prison breach, fail to comply or appear, fail to attend court, breach of probation, obstruct justice, etc.

<sup>6</sup> Other Criminal Code offences include counterfeiting, trespass at night, offences vs. public order, gaming and betting, invasion of privacy, offences vs. person and reputation, offences vs. rights of property, willful and forbidden acts vs. property, fraudulent transactions re. contracts/trade, offences vs. currency, attempts, conspiracies, accessories, and production/distribution of child pornography. Victims may be present where the offence is uttering threats.

<sup>7</sup> Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

Source: Incident-based UCR2, Policing Services Program, Canadian Centre for Justice Statistics

Note: Data are from a non-representative sample of 166 police departments, representing 53% of the national volume of crime.

\* Sex breakdowns may not add to the total because in some situations the sex of the person was not identified.

<sup>1</sup> Relationship establishes the identity of the accused (spouse, friend) relative to a victim at the time the incident occurred. Spouse and ex-spouse denote marriage or common-law.

<sup>2</sup> Homicide characteristics reported to UCR2 may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

<sup>3</sup> CBH is an abbreviation for causing bodily harm.

<sup>4</sup> Other Family includes child, sibling, grandparents, aunts, uncles, cousins, and all others related to the victim either by blood or marriage.

<sup>5</sup> Friend includes long-term and/or close relationship with the victim (includes intimates, ex-friends, ex-intimates).

<sup>6</sup> Unknown is coded when the identity of the accused is not known or the relationship cannot be established.

**Source:** Incident-based UCR2, Policing Services Program, Canadian Centre for Justice Statistics.

**Note:** Data are from a non-representative sample of 166 police departments, representing 53% of the national volume of crime.

\* Sex breakdowns may not add to the total because in some situations the sex of the person was not identified.

<sup>1</sup> Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

<sup>2</sup> Homicide characteristics reported to UCR2 may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

<sup>3</sup> CBH is an abbreviation for causing bodily harm.

<sup>1</sup> Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Includes persons charged and persons not charged for a variety of reasons. Please refer to Section 6.32 of this report for further detail.

<sup>2</sup> Homicide characteristics reported to UCR2 may not match those on the Homicide data base. For detailed analysis on homicides in Canada, refer to the Homicide Survey.

<sup>3</sup> CBH is an abbreviation for causing bodily harm.

<sup>4</sup> Cleared otherwise includes suicide or death of the accused, diplomatic immunity, complainant declines to lay charges, department discretion, diversion (alternative measures), etc.

## Chapter 5

### Data Quality

#### 5.1 Authority

The authority to collect UCR statistics is provided under the *Statistics Act*, Revised Statutes of Canada, 1985, Chapter S19.

#### 5.2 Confidentiality

Statistics Canada is prohibited by law from publishing any statistics which would divulge information obtained from the UCR Survey that relates to any identifiable respondent or individual without their previous written consent. The information reported is treated in confidence, used for statistical purposes, and published in aggregate form only. The confidentiality provisions of the *Statistics Act* are not affected by either the *Access to Information Act* or any other legislation.

#### 5.3 Uses of the Data

Data from the UCR Survey provide key information for crime analysis, resource planning and program development for the policing community. Municipal and provincial governments use the data to aid decisions about the distribution of police resources, definitions of provincial standards and for comparisons with other departments and provinces. To the federal government it provides information for policy and legislative development, evaluation of new legislative initiatives, and international comparisons. To the public, the survey offers information on the nature and extent of police-reported crime and crime trends in Canada. As well, media, academics and researchers use these data to examine specific issues about crime.

#### 5.4 Coverage

##### Aggregate UCR Survey

The aggregate UCR Survey has produced a continuous historical record of crime data since 1962. Coverage in terms of police respondents complying with the aggregate UCR Survey is virtually 100 percent. There are approximately 1,800 separate police locations responding to the survey, comprising about 360 different police forces. The most significant loss of information occurs in the rare situation where a police force is unable to submit data to the CCJS. In this situation, estimates are calculated for that particular force.

##### Incident-based UCR (UCR2) Survey

Due to its phased implementation, the degree of coverage for the Incident-based UCR2 Survey is in constant flux. In 2000, the Incident-based UCR2 Survey had 166 police forces reporting to it, representing about 53% of the national volume of reported crime. The reader is cautioned that the incident-based UCR2 data are not representative of any particular region in Canada: 35% of the incidents are currently from Quebec, 33% from Ontario, 11% from Alberta, 6% from British Columbia, 6% from Manitoba, 5% from Saskatchewan, 2% from Nova Scotia, 1% from New Brunswick and 1% from Newfoundland. This data set, with the exception of Quebec, is composed primarily of urban police departments. The data are not nationally or regionally representative.

#### 5.5 Data Capture and Editing

Aggregate and incident-based UCR data are handled, processed, and stored in separate operational systems. In order to maintain historical continuity with the aggregate survey as well as comparability across police forces during implementation, detailed data obtained from the incident-based survey are tabulated in order to convert them into counts consistent with those of the aggregate survey. During production of the annual crime data, data from the aggregate UCR Survey and aggregated data from the Incident-based UCR Survey are combined to create national statistics.

##### Aggregate UCR Survey

Data for the aggregate survey are sent to the CCJS on survey forms or in machine-readable format. Monthly counts of aggregate crime and traffic incidents are recorded by police agencies and forwarded to the CCJS approximately two weeks after month-end. These forms are visually edited for completeness and consistency and, if necessary, follow-up telephone calls are made to the respondent for clarification and correction. The crime and traffic data are transferred to an electronic format by the Data Capture Unit of Statistics Canada. All counts are verified to ensure that the information has been correctly transferred from the paper forms to tape. Machine-readable files are transferred to the mainframe environment. Some respondents submit their counts in machine-readable format, such as tape, which eliminates the initial processing procedures.

The raw data are also processed through a set of automated edit routines to further verify the counts for internal consistency. Error reports are produced and respondents are contacted to obtain correct information. Corrections are re-submitted for verification and updates. Master files of aggregate data are continually updated throughout the year and, in turn, are further processed when it is necessary to produce the year-end data.

Police departments are expected to revise submitted information if additional information becomes available (e.g., an accused has been charged for a previously reported incident). Assuming all procedures have been followed by the respondents, the UCR counts processed by the CCJS will correspond with the records maintained by police departments at year-end.

### **Incident-based UCR (UCR2) Survey**

Data for the Incident-based Survey are collected from police automated operational systems by an approved extraction program and are forwarded to the CCJS in a machine-readable format with a standard record layout. Data are generally submitted to the CCJS on a monthly basis.

Upon receipt of the data by the CCJS, initial data quality procedures are applied and the data are prepared for processing by the central processing system. This central processing system performs a series of intensive edits (more than 300) on these data, including duplicate record checks, logic and format error edits and imputations. The system does not allow for errors on key variables; they will not pass the edits until they have been corrected. The outcome of the edits and imputations is documented in a series of edit reports and all processed data are stored in a database. Included in the edit reports are a summary of the number and types of records processed, a frequency count of edit failures and a listing of every record which failed an edit. All edits are examined at the CCJS with the objective of identifying possible problems with the respondent system interface or with respondent adherence to survey data requirements. Any problems are followed up with the respondent. Edit reports are also sent to the respondents for their information and data correction.

## **5.6 Data Compilation and Verification**

The data capture and correction processes of both UCR surveys are ongoing activities. At present, the final counts are released to the public in July. This release follows a lengthy data production cycle which begins in December of the previous year with the preparation of interim consolidated statistics. These preliminary statistics are prepared to provide an early warning of any data problems. Problems are identified with the use of a statistical "tolerance" model specifically designed to compare a single respondent to its past behaviour and to that of similar respondents.

Non-respondents are easily identified using this model, and staff then follow-up to collect outstanding monthly counts. Respondents not submitting counts for 6 months or more are referred to as "non-respondents". A closure of a police service or seasonal operation may explain an anomaly in the data. The largest police departments responding to the UCR surveys are asked to review summary data tables for completeness and accuracy and, if necessary, adjustments are made before a master file is created. In order to create either the preliminary or final master file, the incident-based file must be converted to produce counts comparable to those produced by the aggregate survey. The converted counts, or the "Derived Aggregate Offence" data, are combined with the aggregate survey data to produce the national and provincial tables displayed in this publication. In this way, continuity is maintained with the historical crime series.

## **5.7 Quality of the Data**

Data quality is of primary concern with respect to any survey. The CCJS follows several different practices to ensure the quality of UCR data. The internal integrity of records received from respondents and the reasonableness of a respondent's counts are continually assessed through both manual and electronic editing of the data (see section 5.5 for a description of the editing processes). Where possible, UCR data are checked against independently produced respondent crime statistics such as police annual reports. Respondents are also provided toll-free telephone support to assist with any survey-related issues. Training is provided to new respondents and all respondents are provided with comprehensive user manuals which provide rules on survey scoring. The CCJS does not, however, normally audit respondent data.

As the aggregate and incident-based surveys operate in a significantly different manner, specific issues surrounding data quality and the procedures required to ensure it are different.

### **Aggregate UCR**

Compared to the Incident-based UCR Survey, the aggregate survey is fairly simple to operate, validate, edit and release. The aggregate master files are continually updated throughout the year, and are further processed when necessary to produce consolidated aggregate statistics. Errors identified during the editing of the data are pursued with the respondent where necessary and corrected. As the data reported to the aggregate survey are provided in the form of summary counts, problems related to counting and scoring can only be identified by assessing the reasonableness of a respondent's counts. In this regard, extensive survey support to respondents through user guides, telephone support and training is crucial to maintaining data quality.

### **Incident-based UCR (UCR2) Survey**

The Incident-based UCR Survey captures a broad variety of data on each criminal incident. Data from this survey also undergo extensive editing during the data capture process at the CCJS. Unlike aggregate data where editing can only identify missing data and ensure that cell values tabulate correctly, incident-based data are subjected to very detailed validity and logic checks

and imputations which assess a respondent's compliance with survey data requirements and ensure that only records which conform to these requirements are available for analysis. Consequently, in addition to being able to assess the overall counts of incidents, the quality of data associated with each incident can be evaluated in greater detail. Anomalies in crime reporting practices that previously lay undetected are now being corrected. As more police agencies begin to participate in the Incident-based UCR2 Survey, the data provide an increasingly more accurate picture of the nature of incidents reported to police in Canada.

Specific areas of concern with respect to data quality include: the variety of software interfaces used to extract incident-based UCR2 data; the complexity of data extraction and data capture; the different operational and administrative practices among different police forces, and; the need to accurately translate these data into aggregate counts.

## 5.8 Under-Reporting Crime

The UCR Survey collects information on only those crimes which come to the attention of the police. The UCR data, therefore, do not contain a count of all crimes in Canada: some crimes are never detected and, of those that are, some are never brought to the attention of the police. As a result, these are not reported to the survey. Furthermore, the **most serious offence** (see section 6.25) scoring rule explicitly under-counts the number of crimes coming to the attention of police. In actuality, the UCR crime statistics represent a subset of all crimes occurring in Canada, but are an accurate measure of the number of incidents of crime being reported to the police.

The CCJS does not undertake audits of a police department's Records Unit to ensure complete and accurate reporting. Nor does the CCJS examine records which the police have processed and described as outside the scope of the survey. Police departments, however, have established rules governing the collection of data (coding manuals) and have designated individuals with the task of verifying the reports from which the data are extracted. Local quality control measures are in effect for respondents of the aggregate and the incident-based survey to minimize the under-reporting of crime.

## 5.9 Inter-Municipal Comparisons

Data users should consider a number of factors when comparing crime data from various municipal police forces. Differences across municipalities in their crime data can be attributed to factors such as demographic and economic differences, and police force and community characteristics. Inter-municipal differences in police policies or resources and historical changes in enforcement practices of police may drive variations in reported statistics. Statistics for certain crimes (e.g., prostitution, gambling, drug crime and traffic offences) are particularly sensitive to changes in policing practices.

Data users are also advised that populations used to calculate crime rates for municipal police agencies reflect only the resident population of the police agency's area of jurisdiction, not the number of people spending part of their day in the area. This means that police agencies responsible for only urban core areas will show high crime rates because of the areas' relatively small resident populations and high volumes of crime. In order to enhance comparability among major metropolitan areas data are now compiled at the census metropolitan area (CMA) level.

## 5.10 Comparability over Time

### Legislative Influences

Changes in legislation and the resulting change in the offence classification creates discontinuity in the historical record of particular criminal offences. Legislative changes to assault, sexual assault, theft, arson, mischief, prostitution and youth crime must be considered when making comparisons over time. Some of the more significant changes are as follows:

#### Sexual Assault: Bill C-127 (1983):

Bill C-127 abolished the offences of rape, attempted rape and indecent assault and introduced a three-tiered structure for sexual assault offences. The Bill also eased the circumstances under which police could lay charges in incidents of sexual and non-sexual assault.

#### Young Offenders Act (1984):

With the proclamation of the YOA in April 1984, 12 years became the minimum age for which criminal charges could be laid. However, the maximum age continued to vary until April 1985, when the maximum age of 17 (up to the 18th birthday) was established in all provinces and territories.

Youths, as defined in this publication, refer to those aged 12 to 17 (inclusive). This definition applies to the target group who fall under the *Young Offenders Act (YOA)*.

#### Dangerous and Impaired Operation: Bill C-18 (1985):

Bill C-18 imposed more stringent sentences for dangerous driving and drinking and driving. It also facilitated the enforcement of impaired driving laws by authorizing police to take blood and/or breath samples under certain circumstances.

Property value limits: Bill C-18 (1985) and Bill C-42 (1995):

In 1985, Bill C-18 altered the property value limits from under and over \$200 to under and over \$1,000. This applies to offences such as theft, possession of stolen goods, mischief and fraud.

As of February 1995, Bill C-42 revised the property value limits to under and over \$5,000.

Alternative measures: Bill C-41 (1996):

Bill C-41 was proclaimed into law September 3, 1996. One of its highlights was the introduction of "alternative measures" for adults, which provided ways of dealing with disputes and minor offences outside the formal court proceedings.

Firearms: Bill C-68 (1997):

Bill C-68, proclaimed on January 1, 1997, requires that all firearm owners must obtain a Firearms Licence by January, 2001. This licence replaces the Firearms Acquisition Certificate in use since 1977. Commencing October 1, 1998, each weapon must be registered within five years and a Registration Certificate will be issued. Bill C-68 also provides for tougher penalties for using a firearm while committing a crime.

Controlled Drugs and Substances Act: Bill C-8 (1997):

This new legislation came into force on May 14, 1997. This new legislation repeals and replaces the *Narcotic Control Act* and Parts III and IV of the *Food and Drugs Act*.

Dangerous Operation Evading Police: Bill C-202 (2000):

On March 30 2000, Bill C202 came into effect. This legislation amends section 249 of the *Criminal Code* creating new offences of dangerous operation of a motor vehicle when done with the intention of evading the police.

**Comparing UCR Data with Courts and Corrections Data**

It is difficult to make comparisons between data reported by police and data from other sectors of the criminal justice system (i.e., courts and corrections). There is no single unit of count (i.e., incidents, offences, charges, cases or persons) which is defined consistently across the major sectors of the justice system. As well, charges actually laid can be different from the **most serious offence** by which incidents are categorized. In addition, the number and type of charges laid by police may change at the pre-court stage or during the court process. Time lags between the various stages of the justice process also make comparisons difficult.

## Chapter 6

### Concepts and Definitions

#### 6.1 Incident

The “**incident**” is the basis for counting reported crime in both UCR Surveys. An incident is the set of connected events usually constituting an occurrence report. In the aggregate survey, the incident is used in conjunction with the most serious offence rule (MSO) (see section 6.25 on the MSO rule) to form the aggregate offence counts. In the incident-based survey, information for each incident is reported individually. Aggregate most serious offence rules are then applied to these data in order to reconcile them with historical aggregate counts as well as with data from aggregate respondents (see section 5.6 on data compilation and verification). The **incident “date”** is based on the date the incident became known to the police, as opposed to the date on which the incident occurred.

#### 6.2 Aggregate UCR Survey

In UCR terminology, **Aggregate UCR** has two meanings. It can represent both the aggregate survey instrument itself as well as the aggregate *form* of UCR data (thus including incident-based UCR data which have been translated into aggregate counts). The aggregate UCR concepts and definitions described below apply equally to both. In this report, aggregate UCR statistics are presented in tables 3.1 to 3.4.

**6.21 Violent incidents** involve offences that deal with the application, or threat of application, of force to a person. These include homicide, attempted murder, various forms of sexual and non-sexual assault, robbery and abduction. Traffic incidents that result in death or bodily harm are included under *Criminal Code* traffic incidents.

**6.22 Property incidents** involve unlawful acts with the intent of gaining property but do not involve the use or threat of violence against an individual. Theft, breaking and entering, fraud and possession of stolen goods are examples of property crimes.

**6.23 Other *Criminal Code* incidents** involve the remaining *Criminal Code* offences that are not classified as violent or property incidents (excluding traffic). Examples are mischief, bail violations, disturbing the peace, arson, prostitution and offensive weapons.

**6.24 Total *Criminal Code* incidents** is the tabulation of all violent, property and other *Criminal Code* incidents reported for a given year.

**6.25 Most Serious Offence** The UCR Survey classifies incidents according to the **most serious offence (MSO)** in the incident. In categorizing incidents, violent offences always take precedence over non-violent offences. Within violent and non-violent, offences are then sorted according to the maximum sentence under the *Criminal Code*. The UCR Survey scores violent incidents differently from other types of crime. For violent crimes, a separate incident is recorded for each victim (categorized according to the *most serious offence* against the victim). If, for example, one person assaults three people, then three incidents are recorded. If three people assault one person, only one incident is recorded. For non-violent crimes, one incident (categorized according to the *most serious offence* in the incident) is counted for every distinct or separate occurrence.

Robbery is one exception to the above scoring rule. Robbery is categorized as a violent offence. Unlike all other violent offences, one occurrence of robbery is equal to one incident, regardless of the number of victims. The reason for this exception is that robbery can involve many people who could all be considered victims. In a bank robbery with 5 tellers and 20 customers present, 25 incidents of robbery would be counted if the normal scoring rule for violent incidents were applied. This would seriously overstate the occurrence of robbery.

Thus, the total number of incidents recorded by the UCR Survey is not a census of all violations of the law that come to the attention of police. Rather, it is equal to the number of victims of violent crimes (other than robberies) plus the number of separate occurrences of non-violent crimes (and robberies).

**6.26 Actual Incidents** When a crime is reported to the police, the incident is recorded as a “reported” incident. Police then conduct a preliminary investigation to determine the validity of the report. Occasionally, crimes reported to the police prove to be unfounded. Unfounded incidents are subtracted from the number of reported incidents to produce the number of “actual incidents.” Numbers and rates of crime are calculated on the basis of “actual incidents” categorized according to the **most serious offence**.

**6.27 Clearance of Actual Incidents** Criminal incidents can either be cleared “by charge” or “cleared otherwise”. When a police investigation leads to the identification of a suspect, an “information” is laid against that person (i.e., the person is formally charged). From a statistical point of view, the laying of an information means that at least one actual incident can be “cleared by charge”.

Incidents can also be “cleared otherwise.” In some cases, police cannot lay an information even if they have identified a suspect and have enough evidence to support the laying of an information. Examples include cases of diplomatic immunity, instances where the complainant declines to proceed with charges against the accused, or cases where the alleged offender dies before he or she can be formally charged. In addition, sometimes diversionary or alternative measures are used. Such incidents are considered to be “cleared otherwise,” that is, other than by the laying of a charge.

Since the process of solving crime is often time-consuming, a criminal incident may be solved months or even years after it was reported to police and recorded on the UCR Survey. Therefore, on the aggregate UCR database, there is no direct relationship between the number of “actual incidents” and the number of “incidents cleared.” This is why it is possible for the number of incidents cleared to be greater than the total number of actual incidents. Although total incidents are not necessarily linked with those incidents that are cleared, a clearance rate may provide a good indication of the proportion of incidents that are cleared by charge or otherwise for different types of offences.

Some types of procedural differences influence the comparability of municipal or provincial data. Specifically, the survey element “clearance status” is interpreted differently in several provinces compared to other jurisdictions. In New Brunswick and Quebec (for the Sûreté du Québec only), the initial clearance status recommended by the police (e.g., cleared by a specific charge) is subject to approval by the Crown. Should the Crown find insufficient evidence to proceed with the charge, the police revise their records to take into account the recommendation of the Crown. According to the data element definition, a charge is cleared only if there is sufficient evidence to proceed. However, other jurisdictions, including British Columbia which has a system similar to Quebec, do not revise their internal records when the Crown disagrees with the police assessment of the evidence. For this reason, caution should be taken in making comparisons between jurisdictions for this data element.

**6.28 Persons Charged** The UCR Survey also records the number of persons charged. For incidents that are cleared, the survey collects the number of adults charged by sex as well as the number of youths (aged 12 to 17 years) charged by sex. The “persons charged” category includes the number of people charged (not the number of charges laid) or recommended for charges by police. A person who is simultaneously charged with more than one offence is counted according to the *most serious offence*, even if the offences occurred in more than one incident. In addition, persons may be counted more than once throughout the year; that is, individuals are counted on each occasion that they are charged by police.

“Persons charged” refers to persons who were charged in connection with a particular incident. These persons, however, may have been charged later with a lesser offence. For example, a person who commits a breaking and entering offence may end up being charged with possession of stolen goods if, for instance, the police have better evidence on the latter offence. Both the “actual incident” and the “person charged” are counted under breaking and entering, even though the person was actually charged with possession of stolen goods.

### 6.3 Incident-based UCR (UCR2) Survey

**6.31 Violations** The Incident-based UCR2 Survey employs a new, more detailed set of offence categories compared to the aggregate UCR. Any attempt to match the aggregate UCR sub-totals of Violent, Property and Other Criminal Code Offences with the incident-based sub-totals is not advised as the two subsets are comprised of different offence categories. For example, the incident-based sub-total of Violations Against the Person includes additional offences (e.g. criminal negligence causing death/causing bodily harm, other related offences causing death, conspire to commit murder, kidnapping, hostage taking, extortion, criminal harassment and other violent violations).

There are six types of violations included in the category of **Violations against Property**: break and enter, theft, arson, possession of stolen goods, fraud and mischief. Once again, two additional offences of arson and mischief are included in this sub-grouping yet are not amongst the components making up “Total Property” offences under the aggregate UCR. Similarly, **Other Criminal Code Violations** within the Incident-based UCR2 Survey includes the additional offence categories of firearm transfers/serial numbers and threatening/harassing phone calls which are not reported separately within the aggregate survey.

Although incident-based survey respondents can code up to four violations on an incident, for reporting purposes, tables 4.2 - 4.20 in this report are based on the most serious offence rule (see section 6.25 for a description of this rule) and include only actual incidents (see section 6.26).

## Persons Data

A key aspect of the incident-based UCR survey is the capture of victim and accused information which is directly linked to the incident.

- 6.32 Charged/Suspect-Chargeable (Accused)** Refers to any person who has been identified by police as being involved in a criminal incident and against whom an information could be laid as a result of sufficient evidence/information. Accused persons include those charged as well as those not charged for a variety of reasons, including diplomatic immunity, use of alternative measures or diversion, and death. Individuals involved only for investigative purposes and subsequently released without being charged or formally processed in some other official manner will not be identified as an accused. Unless otherwise noted, the accused counts and offence characteristics described in the tables in Chapter 4 are based on each accused identified with **each** incident, not the most serious offence a person is charged with at a given time as in the aggregate method (see section 6.28).
- 6.33 Victim** Refers to anyone who is the victim of a violation against the person (as defined by the Incident-based UCR2 Survey). These include all violent violations and any traffic violations that cause bodily harm or death to anyone other than the accused. Persons who are the victim of other types of incidents of crime are not captured. Victimization counts reported in Chapter 4 include each victim. There may be more than one victim in an incident. The categorization of violation type is, as with aggregate UCR, based on the most serious violation against that victim (see most serious offence rule, section 6.25).
